

FLOTRONIC[®] DRUM UNLOADING SYSTEM

When it counts,
count on Unibloc[®]

The Flotronic Unloading System combines our unique One-Nut pump with our barrel unloading skid.

The One-Nut sanitary style pump based on our 3A and EHEDG design, has already proven itself in the hygienic/sanitary industries.

ATEX APPROVED PUMPS

MADE TO CUSTOMER REQUIREMENTS

BESPOKE SYSTEMS

- Systems to cater for any fibre, metal or plastic 200 litre/55 gallon drum or similar.
- The barrel unloading skid can be fully mobile or fixed in place.
- Barrel unloading system to suit the end user's needs, including roller systems if required.

HIGH VISCOSITIES

Combining the High Flow Slimline Style One-Nut pump with our barrel emptying system enables you to now pump highly viscous materials out of your barrel at increased flow rates.

CLEANING

System can be cleaned in place using the pump itself or an external CIP rig. Alternatively, because of the One-Nut design of the pump, it can be easily stripped down for cleaning.

LESS WASTE

- Minimal wastage is achieved with our inflatable seal which ensures minimum product is retained in the barrel.
- Less product hold up than other systems

INFLATABLE SEAL

The seal inflates to give an excellent seal while moving down the barrel; then deflating to enable easy removal from the barrel.

When it counts, count on Unibloc®.

Unibloc Hygienic Technologies provides a broad portfolio of powerful solutions for companies around the world.
