2 **SAFETY**

2.1 IMPORTANT INFORMATION

Always read the maintenance notice before manipulating the valve

DANGER !

Failure to observe these instructions can result in serious bodily injury or loss of life.

CAUTION !

This can also result in less serious injuries or damage to the equipment.

DANGER !

Electricity can result in serious bodily injury or loss of life.

CAUTION !

This can also result in less serious injuries or damage to the equipment.

2.2 GENERAL INFORMATION

NOTE

The following advice is given to ensure optimum use of the equipment.

- The tasks must be performed in the order specified.
- A range of greases for cylinder seals and valve seals has been defined for be in phase with their nature and the regulations according to the uses (See § 7.15).

MAINTENANCE NOTICE AUTOMATIC DCX3 TANK BOTTOM COMPRESSION VALVES with floating seals, diaphragm, aseptic with elastomer seals, metal-to-metal seals or long stroke valves.

3 INTRODUCTION

Disassembling a DCX3 tank bottom compression valve is divided into 2 separate steps :

3.1 DISASSEMBLING THE VALVE

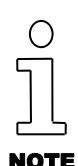

During this step the actuator and shut-off unit can be removed.

- This operation allows access to the shut-off seals (Changing the seals, see § 7.15 for lubrication) and removal of the actuator.
- It is easy to do and can be carried out on site as it does not present any special difficulties.
- It is similar to most maintenance operations carried out on this type of valve.

3.2 DISASSEMBLING THE ACTUATOR (changing inner seals)

- **WARNING :** This operation must be carried out with the correct tools and taking the necessary precautions (**SPRING UNDER TENSION**).
- For switching from a valve NC to NO or DA and inversely, refer to the chapter "Changing configuration".

Note : After any maintenance operations on DEFINOX products, it is imperative to verify that the equipment is in good working order: Seals, pressure, etc.

3.2.1 Safety devices

For the maintenance of NC and NO actuators, we offer on request maintenance sets preventing unintended operation of the plug when the actuator is supplied with air.

DANGER !

RISKS

When changing seals: Risk of trapping fingers between the actuator axis and the top of the seal plate

A tool case reference 7082850 is available which includes the following tools:

4 DISASSEMBLING THE VALVE

Before starting the disassembly procedure, if the valve is fitted with a signalling box it may be necessary to detach the signalling unit from the actuator.

4.1 DISASSEMBLING THE SIGNALLING BOX

Dismantling without disconnection

IMPORTANT : Before starting any work on the box, it is important to ensure that the air supply is closed and that the circuit is purged.

Dismantling with disconnection

IMPORTANT : Before starting any work on the box, it is important to ensure that the mains supply is switched off, that the air supply is closed and that the circuit is purged.

To fit and remove the control top, refer to maintenance notice:

Maintenance notice
NM-258

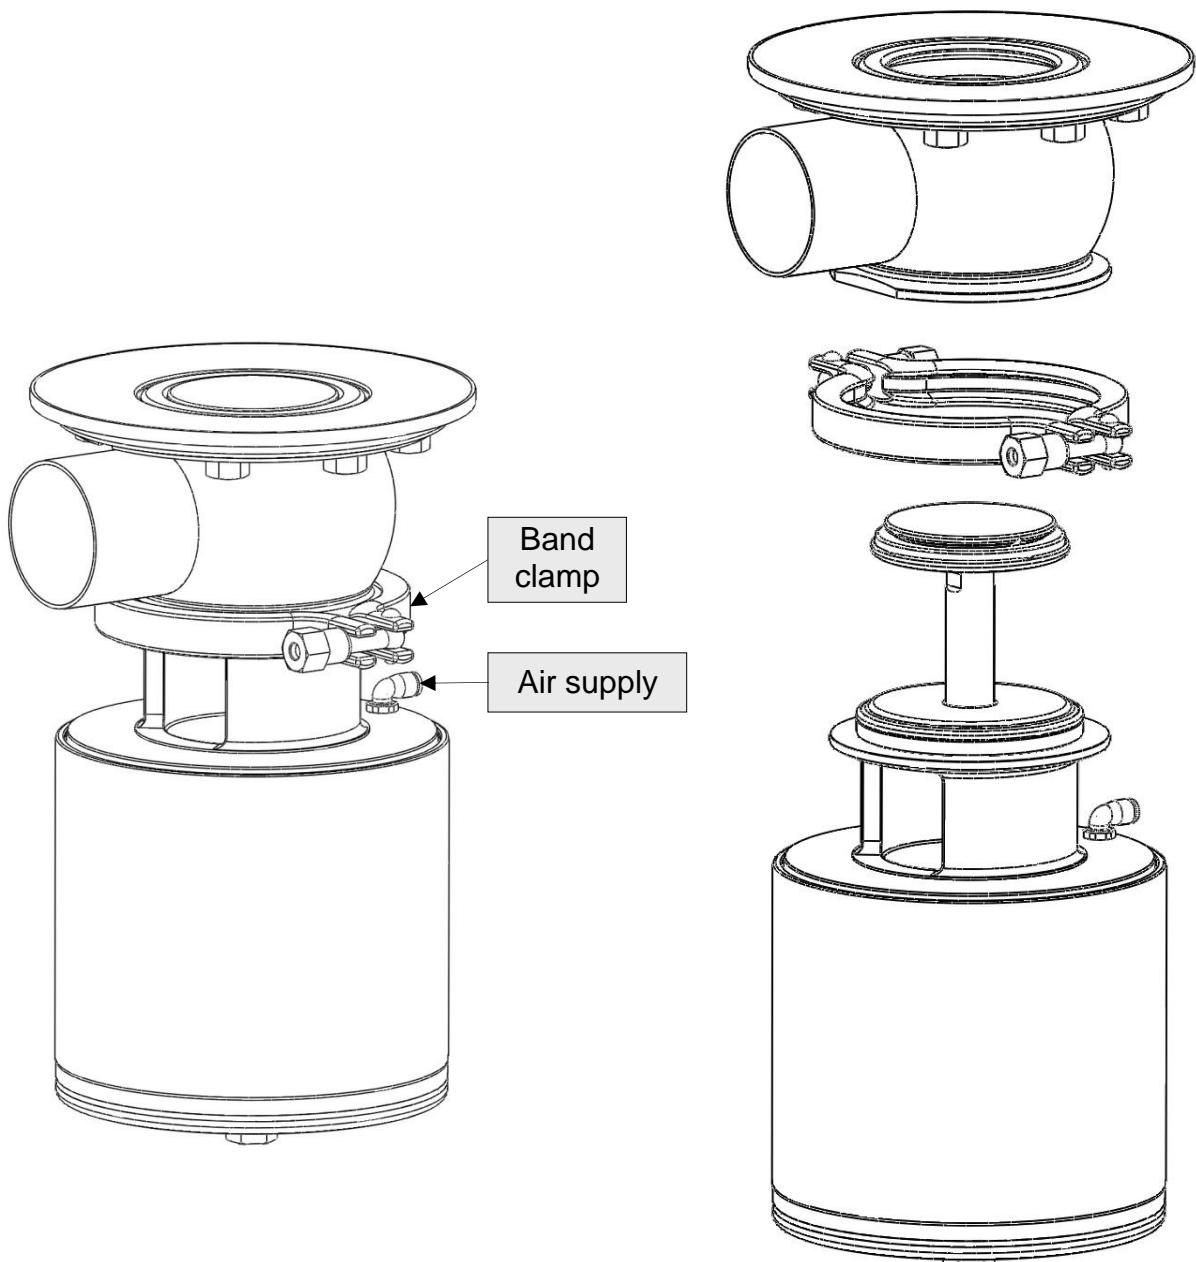

ACS LED

NM-259

For the previous generations control top, refer to maintenance notice:

- **NM-182 for the ICS control top**
- **NM-187 for the ACS control top**

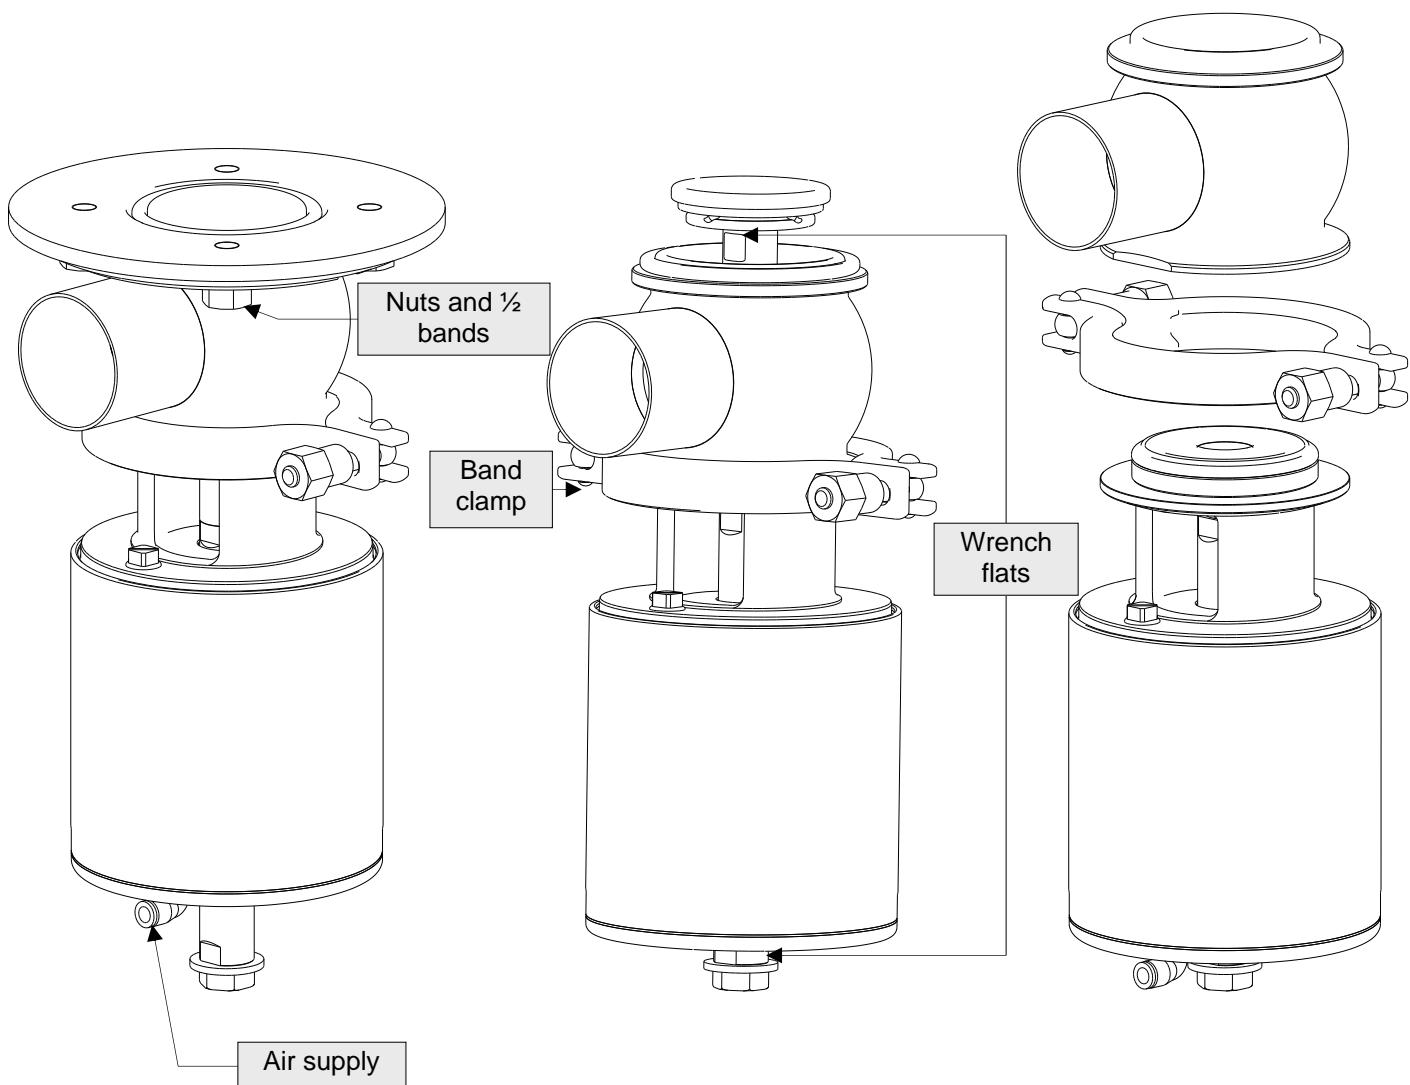

4.2 DISASSEMBLING THE DCX3 VALVE CLAMP COLLAR**4.2.1 Descending piston**

- Supply the NC actuator with air, to relieve the compression spring load on the clamp.
- Remove the clamp.
- Shut off the air to the actuator.
- Remove the actuator and shut-off unit from DCX3 body.
- Unscrew the nuts, then remove the two $\frac{1}{2}$ bands and extract the body

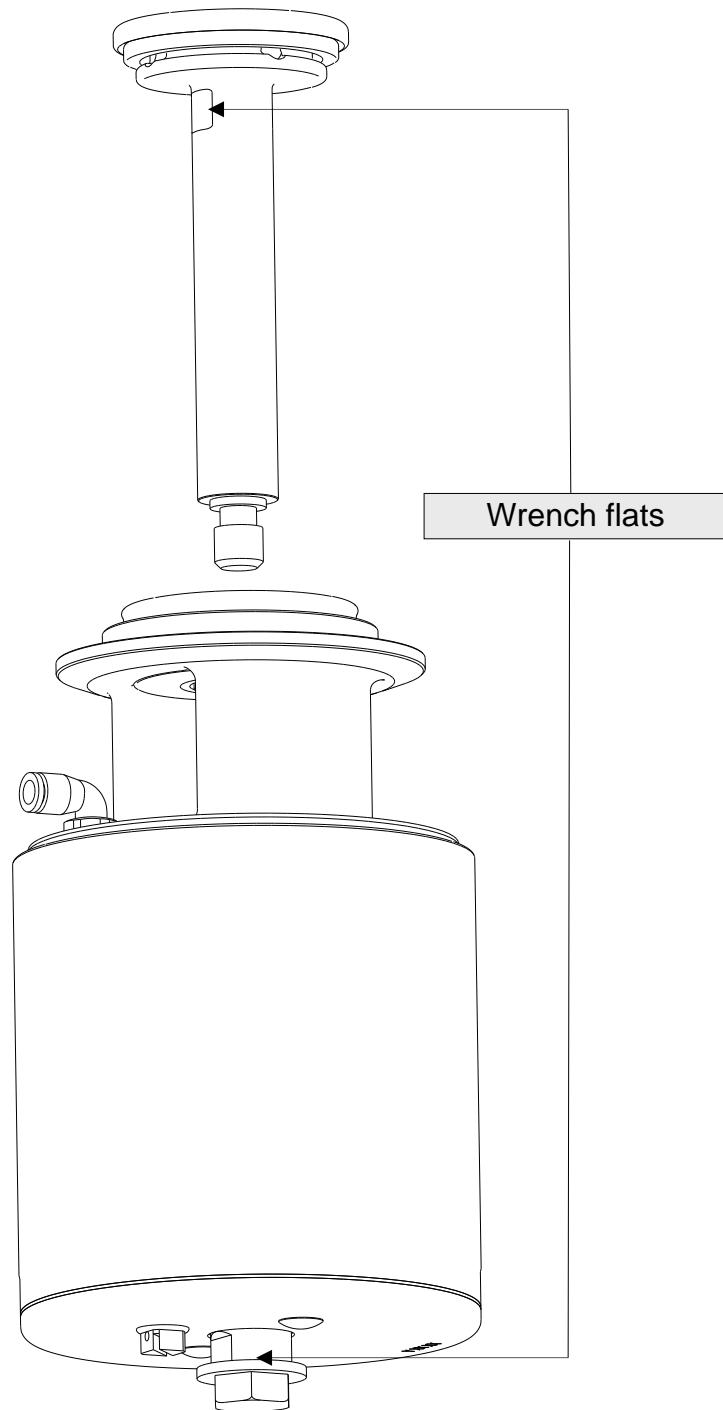

4.2.2 Rising Piston

- Unscrew the nuts, remove the two $\frac{1}{2}$ bands and extract the body and shut-off unit
- Supply air to the NO actuator, then unscrew the piston using the two wrench flats.
- Shut off the air to the actuator.
- Remove the band clamp and remove the actuator and shut-off unit from DCX3 body.

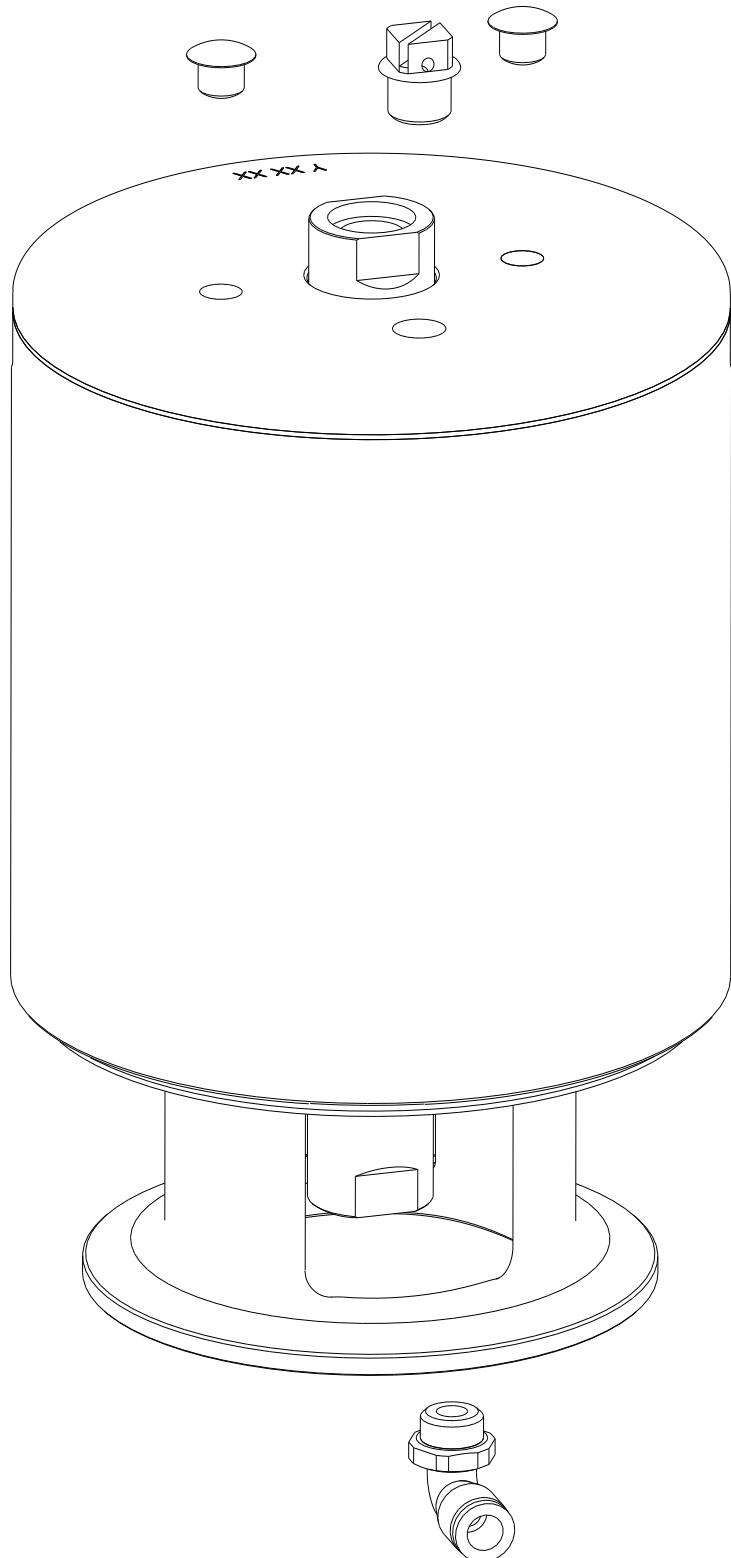

4.3 DISASSEMBLING THE DCX3 TANK BOTTOM VALVE

- The actuator rod and the DCX3 descending piston are equipped with two wrench flats used to unscrew the shut-off unit from the actuator unit. Disassembly of the rising piston is explained in the chapter "DCX3 Bank Bottom Band Clamp".

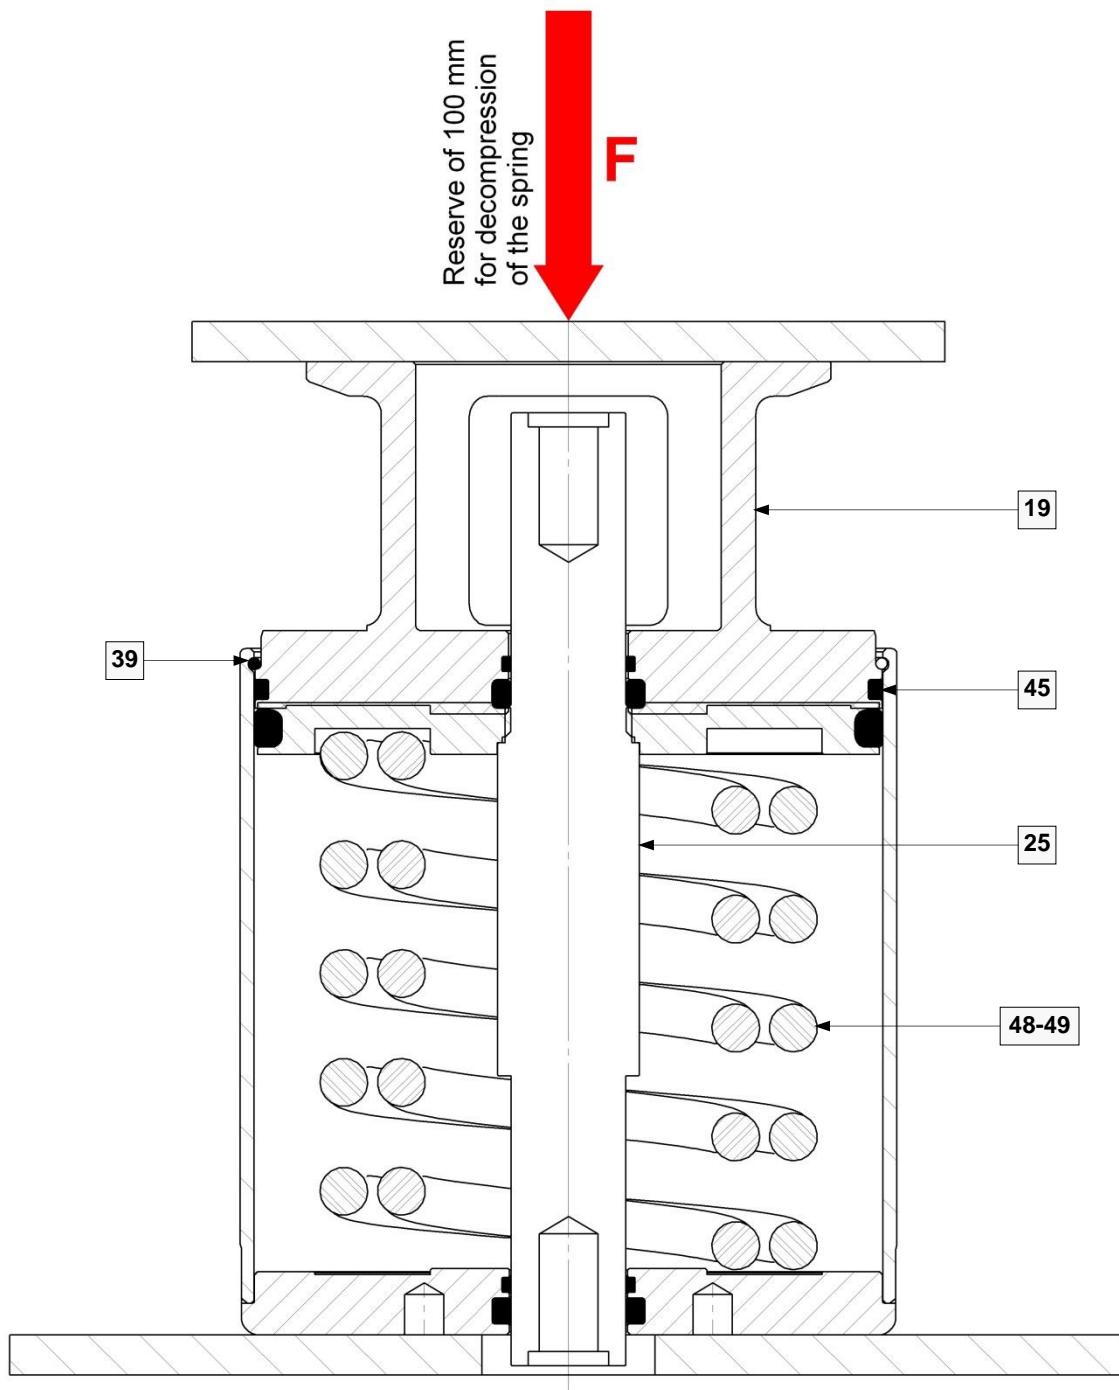

5 DISASSEMBLING THE ACTUATOR

- For all configurations (NO, NC, and DA), remove the air fitting, the screw and the plastic pistons, as well as the hex screw and the washer.

Next, remove the internal parts of the actuator. This operation is dangerous if the correct tools are not used. We advise that you use a hydraulic press or machinery according to the diagram below (take into account a 100 mm expansion range of the spring).

- The actuator is positioned vertically.
- Press down the lantern (Ref: 19).
- Remove the retainer ring (Ref: 39) from its groove using a small screwdriver.
- Release the pressure, the lantern moves upwards.
- Remove the lantern with its O-ring (Ref: 45).
- Remove the inner parts of the actuator (rod/plunger, spring, ref: 25 et 48-49).

6 CHANGING THE SEALS AND RE-ASSEMBLING

6.1 ASSEMBLING THE ACTUATOR

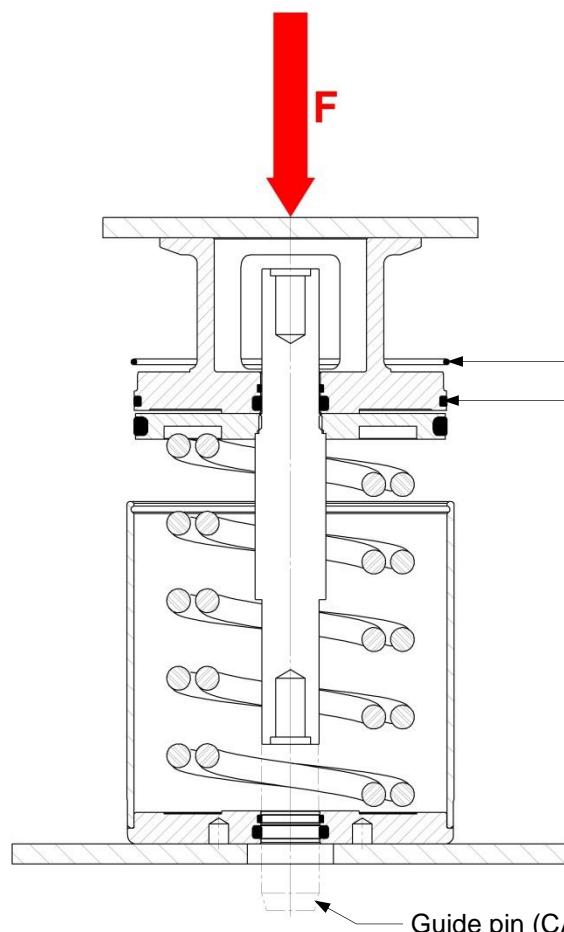

CAUTION : For changing the actuator configuration from **NC** (Normally Closed) to **NO** (Normally Open) or **DA**. (Double Acting), see the following chapter.

CAUTION !

This procedure is performed in the reverse order to dismantling. However, it is necessary to take into account the following information:

- A guide pin centred on the actuator stem ensured that the piston is properly centred in the body. It also avoids also avoids the piston jumping if the spring(s) slip(s) sideways during compression.
- Before reassembling the parts, ensure that the assembly is lubricated with an appropriate lubricant (water-resistant and temperature-resistant food grade grease → Example: 4025 H1 QUINPLEX by Lubrication Engineers, see § 7.15). Ensure that the grease used is compatible with the elastomer seals.
- Take care not to damage the lantern seal [45] when fitting it with the press,
- Ensure that the snap-ring (39) is properly positioned in the recess of the body before releasing pressure,
- Test operation of the actuator before continuing assembly.

6.2 CHANGING ACTUATOR CONFIGURATION

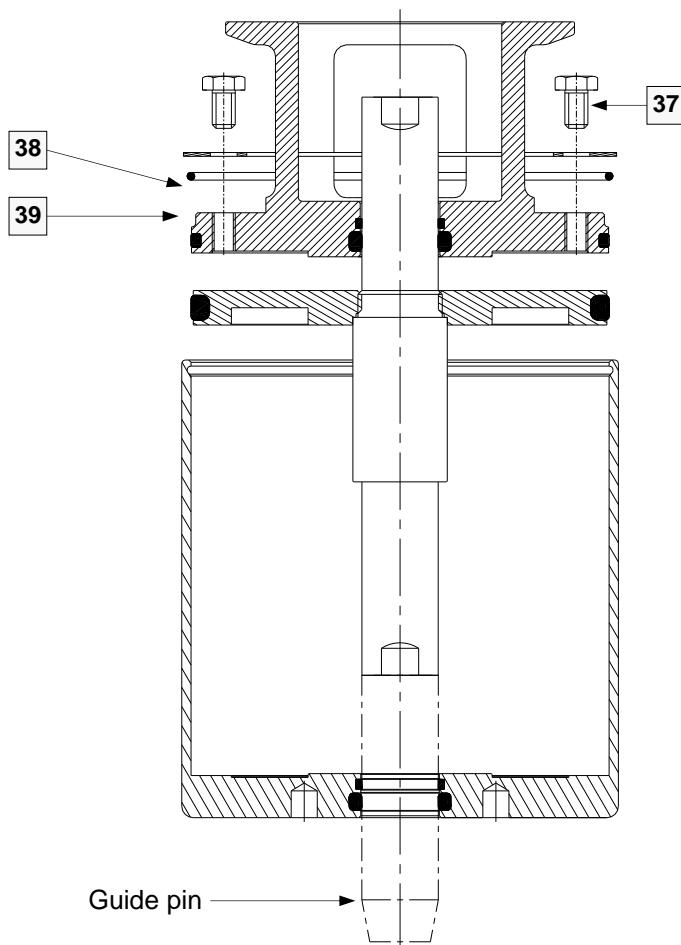

Transforming an **nc** actuator into a **no**:

After opening the actuator, refit the stem/piston and spring assembly the other way around in the body.

Transforming an **nc** actuator into a **da**:

After opening the actuator, remove the spring(s), and change the standard lantern with a (pierced) double-acting lantern [17], attach a holding plate [30] with screws [29] that must be installed with liquid seal.

NOTE: When assembling or converting the DN125 actuator to NO, only spring [48] 7007825 must be installed.

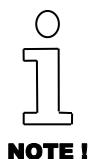

NOTE: For your own safety, check that the snap-ring is properly positioned in its recess. If the snap-ring is damaged or deformed, it must be replaced.

6.3 REPLACING PFA SEALS

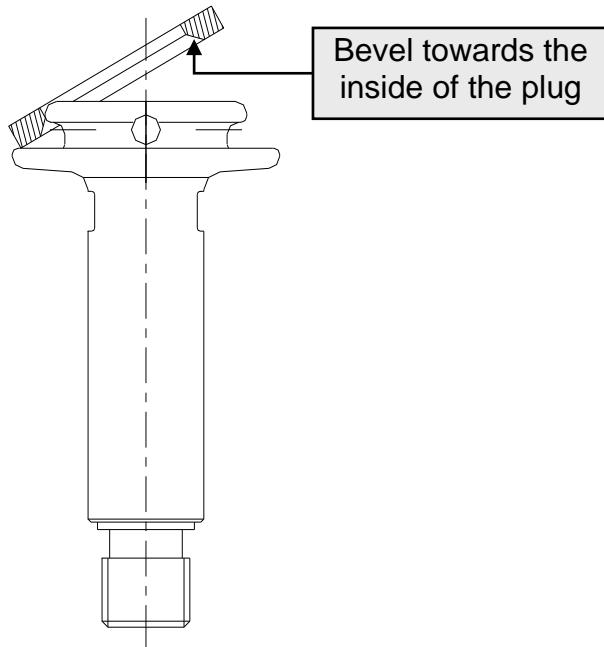

To change PFA seals, follow the guidelines given below:

- Remove the defective seal using a cutter taking care not to mark the bearing surface of the plug (protect the stainless steel surface using the edge of a steel rule or a plastic off-cut),
- Place the new seals in an oven at 284°F (+/- 3%) for 30 minutes.
 - ⇒ Do not exceed 392°F.
 - ⇒ If the temperature is too low, there is a risk that the seal will deform or tear during installation.
- Insert the seal quickly from one side of the groove, then progressively push it into its housing.

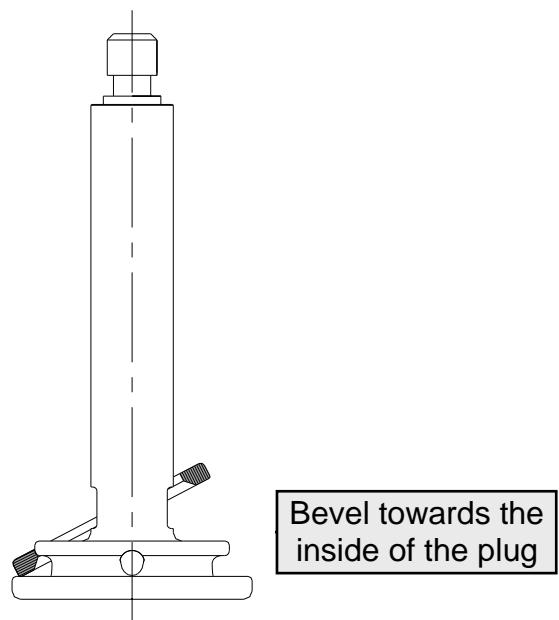

NOTE: always insert the seal on the bevelled side.

6.4 REASSEMBLING OF VALVES

This operation is carried out in the reverse order to disassembly. You should follow the guidelines given below:

- We recommend using a **medium thread lock compound** to lock the plug during reassembly on the actuator and retightening the plug of diaphragm valves after first usage with temperature,
- Do not forget to supply air to the actuator before tightening the clamp collars,
- Before making the final network connections, check that the valve is operating normally. If you encounter difficulties when performing the operations described here, do not hesitate to contact us,
- You can also contact us regarding maintenance for your valves either on-site or at our own premises.

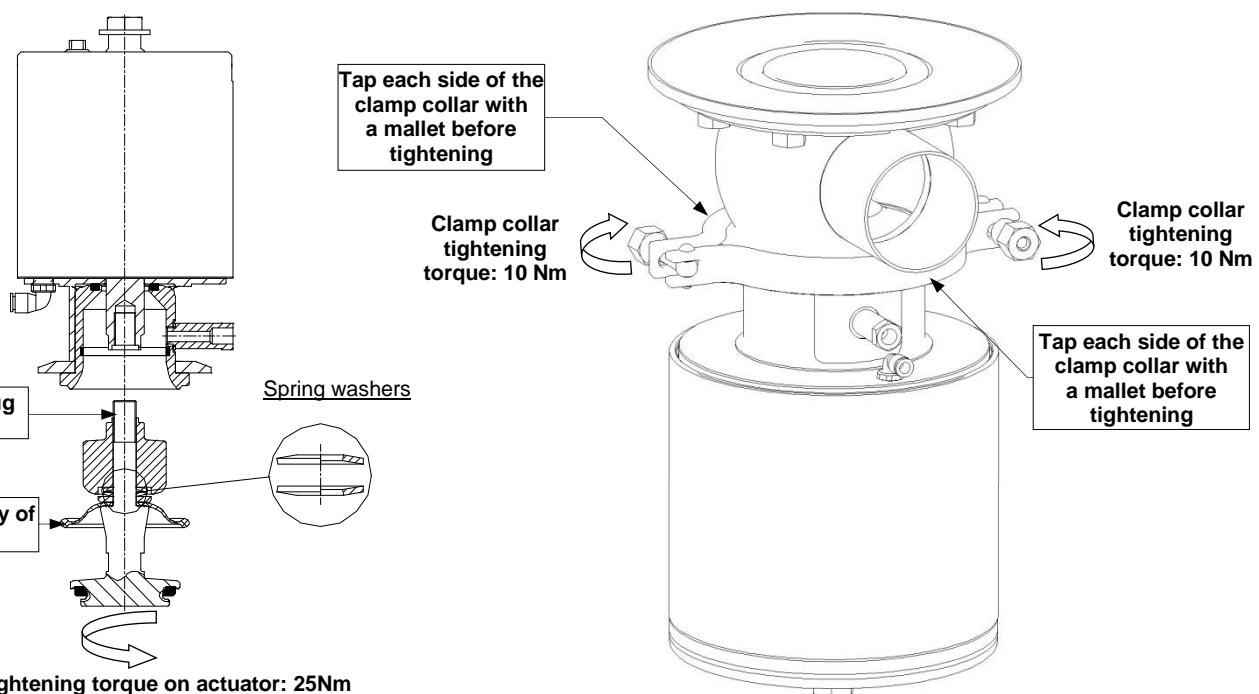

6.5 REASSEMBLING OF DCX3 TANK BOTTOM DIAPHRAGM VALVE

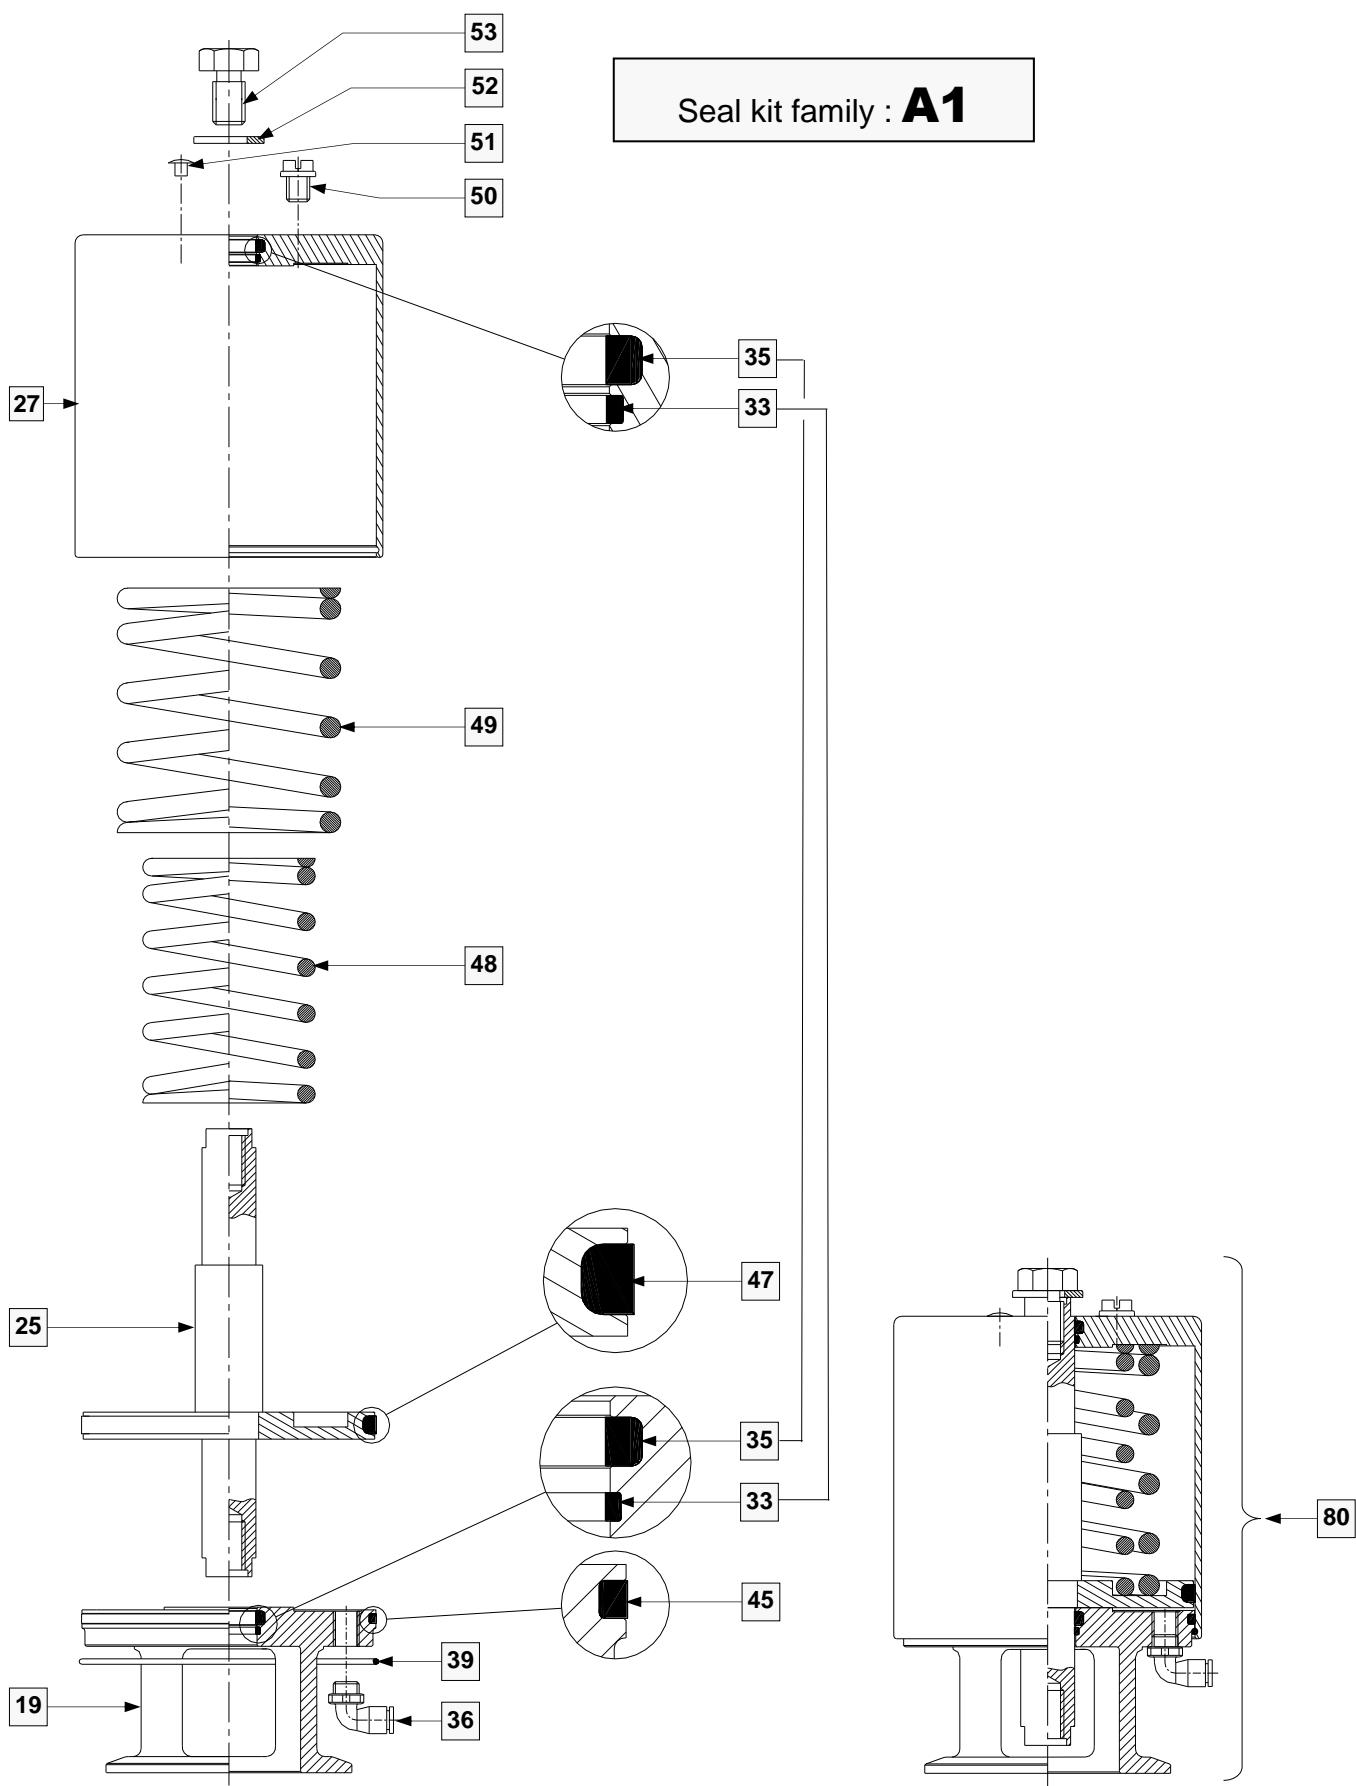

In the case of a DCX3 tank bottom valve equipped with a PTFE diaphragm, do not forget put in place the 2 spring washers that ensure the tightening of the diaphragm with a holding torque of 2.25 Nm.

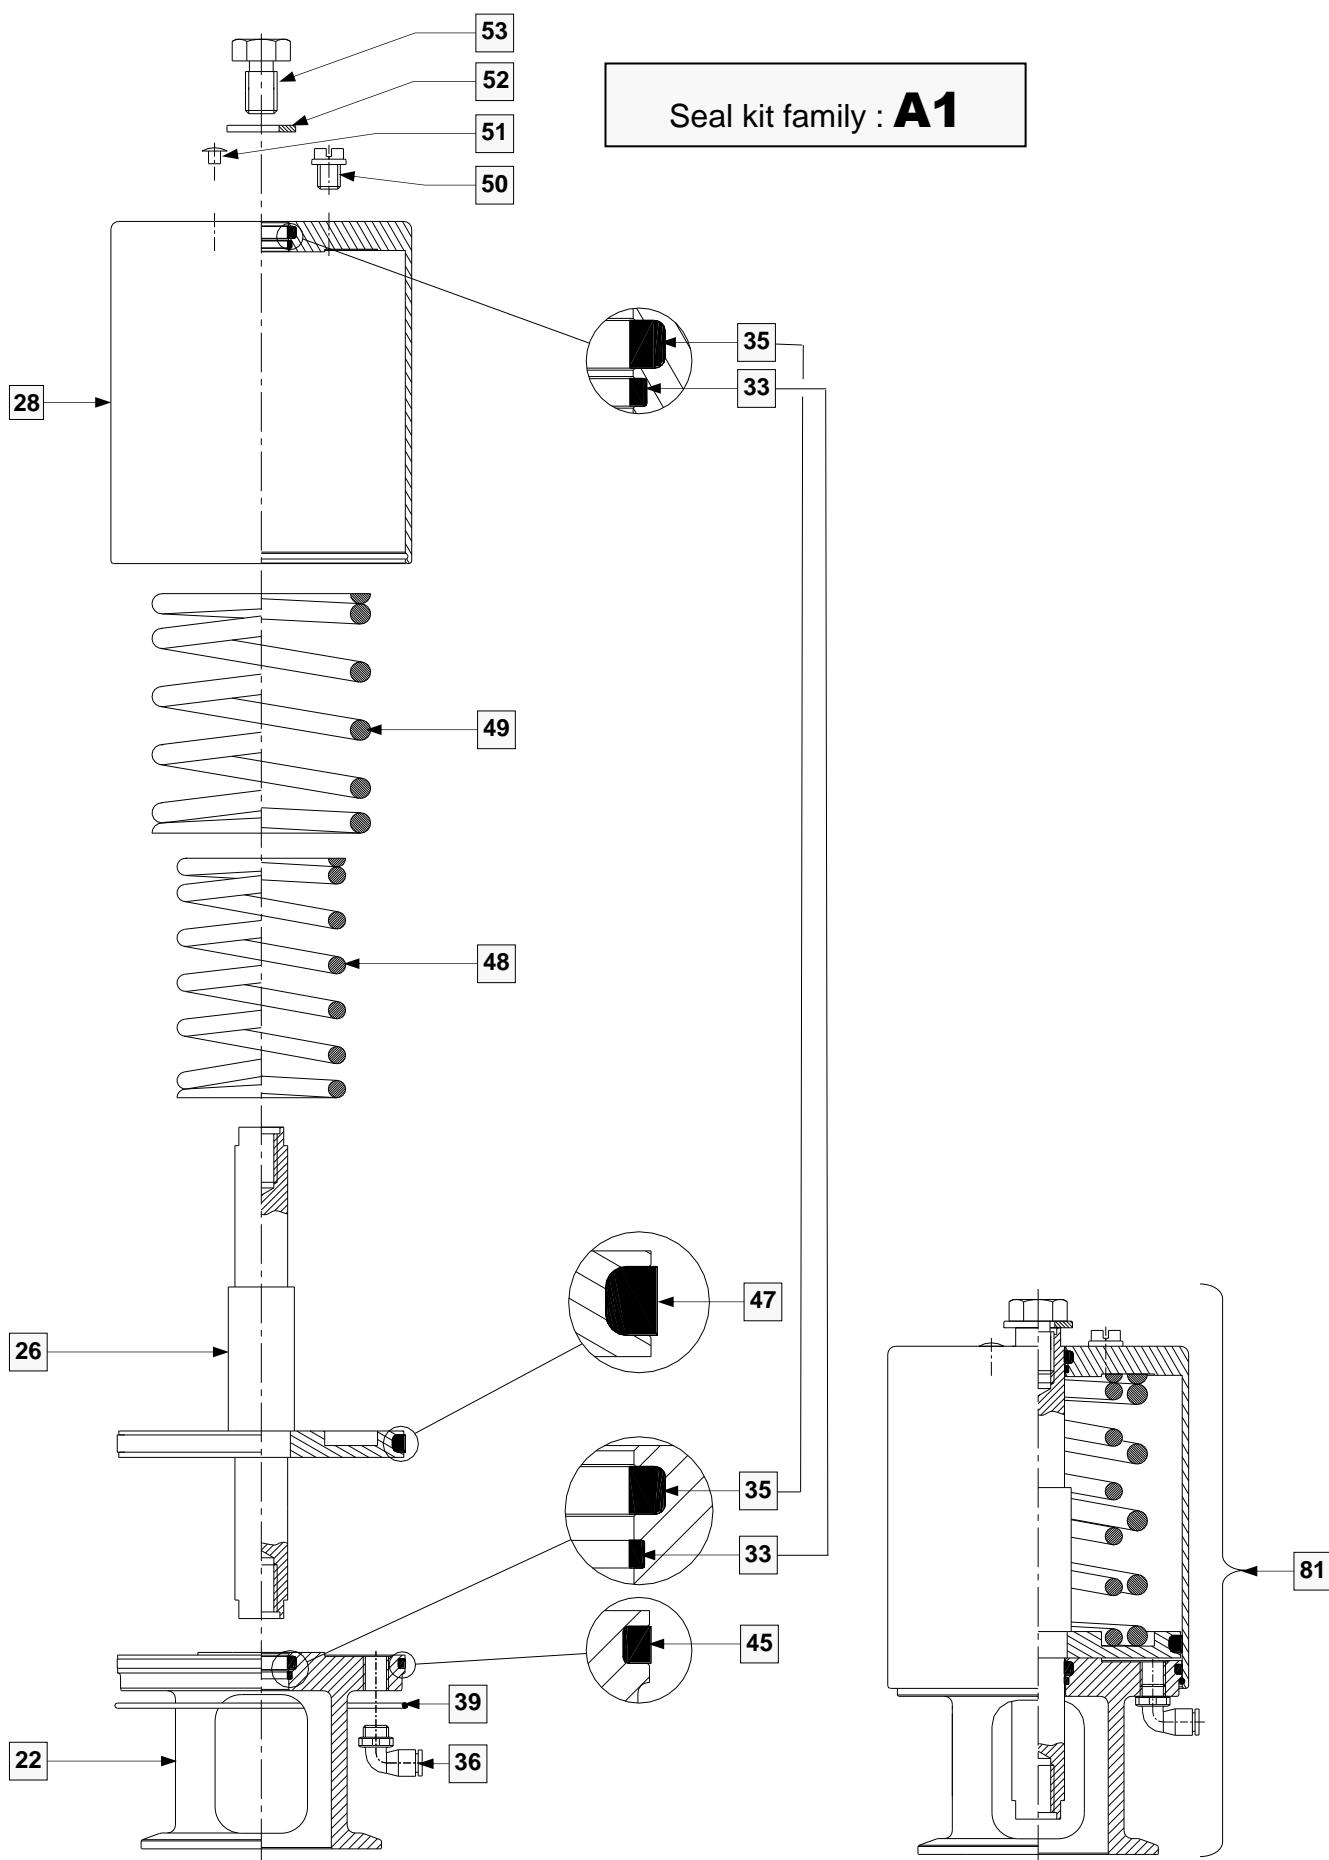

- We recommend using a **medium thread lock compound** to lock the plug during reassembly on the actuator and retightening the plug of diaphragm valves after first usage with temperature,
- Do not forgot to supply air to the actuator before tightening the clamp collars,
- Before making the final network connections, check that the valve is operating normally. If you encounter difficulties when performing the operations described here, do not hesitate to contact us,
- You can also contact us regarding maintenance for your valves either on-site or at our own premises.
