2 SAFETY

2.1 IMPORTANT INFORMATION

Always read the maintenance notice before manipulating the valve

Failure to observe these instructions can result in serious bodily injury or loss of life.

This can also result in less serious injuries or damage to the equipment.

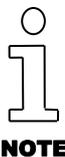

Electricity can result in serious bodily injury or loss of life.

This can also result in less serious injuries or damage to the equipment.

2.2 GENERAL INFORMATION

The following advice is given to ensure optimum use of the equipment.

- The tasks must be performed in the order specified.
- A range of greases for cylinder seals and valve seals has been defined for be in phase with their nature and the regulations according to the uses (See § 9.10).

DCX3 automatic regulating shut-off valve MAINTENANCE NOTICE

3 **INTRODUCTION**

DCX3 regulating shut-off valves are disassembled in 2 separate stages :

3.1 DISASSEMBLING THE VALVE (Extracting the actuator and Plug assembly from the body of the valve)

This operation enables access to the plug seals (Changing the seals, see § 9.10 for lubrication) and the removal of the actuator.

This is a straightforward procedure and can be performed on-site as it does not present any particular problems.

This is the case in the majority of maintenance operations on this type of valve.

3.2 DISASSEMBLING THE ACTUATOR (Changing the internal seals)

DANGER !

CAUTION: This operation must be performed using a special tool ensuring that the necessary precautions are taken (**STRESSED SPRING**)

changing from an NC valve to an NO valve and vice versa, see "Changing configuration".

NOTE

NOTE : After carrying out any maintenance work on DEFINOX products it is essential that you check the correct function of the equipment concerned : tightness, pressure, etc...

3.2.1 **Safety devices**

For the maintenance of NC and NO actuators, we offer on request maintenance sets preventing unintended operation of the plug when the actuator is supplied with air.

DANGER !

RISKS

When changing seals: Risk of trapping fingers between the actuator axis and the top of the seal plate

4 MAINTENANCE OF THE VALVE FOR POSITIONER BURKERT 8630

Before starting the disassembly procedure, if the valve is fitted with a signalling box it may be necessary to detach the signalling unit from the actuator.

4.1 DISASSEMBLING THE 8630 UNIT

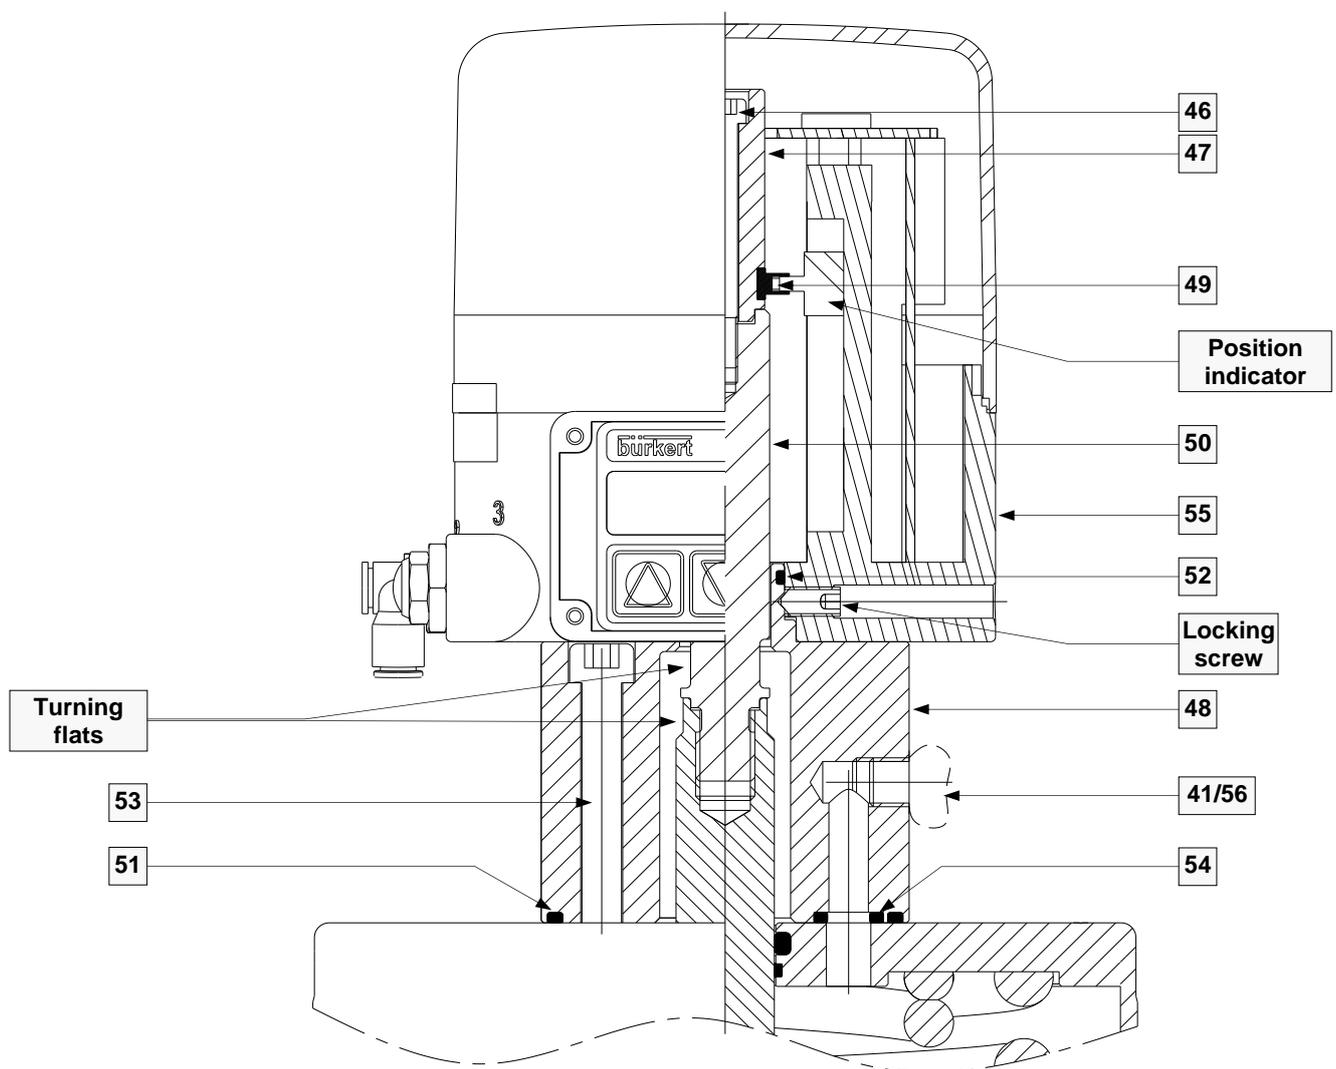

CAUTION !

Dismantling without disconnection

IMPORTANT: Before starting any work on the box, it is important to ensure that the air supply is closed and that the circuit is purged.

Dismantling with disconnection

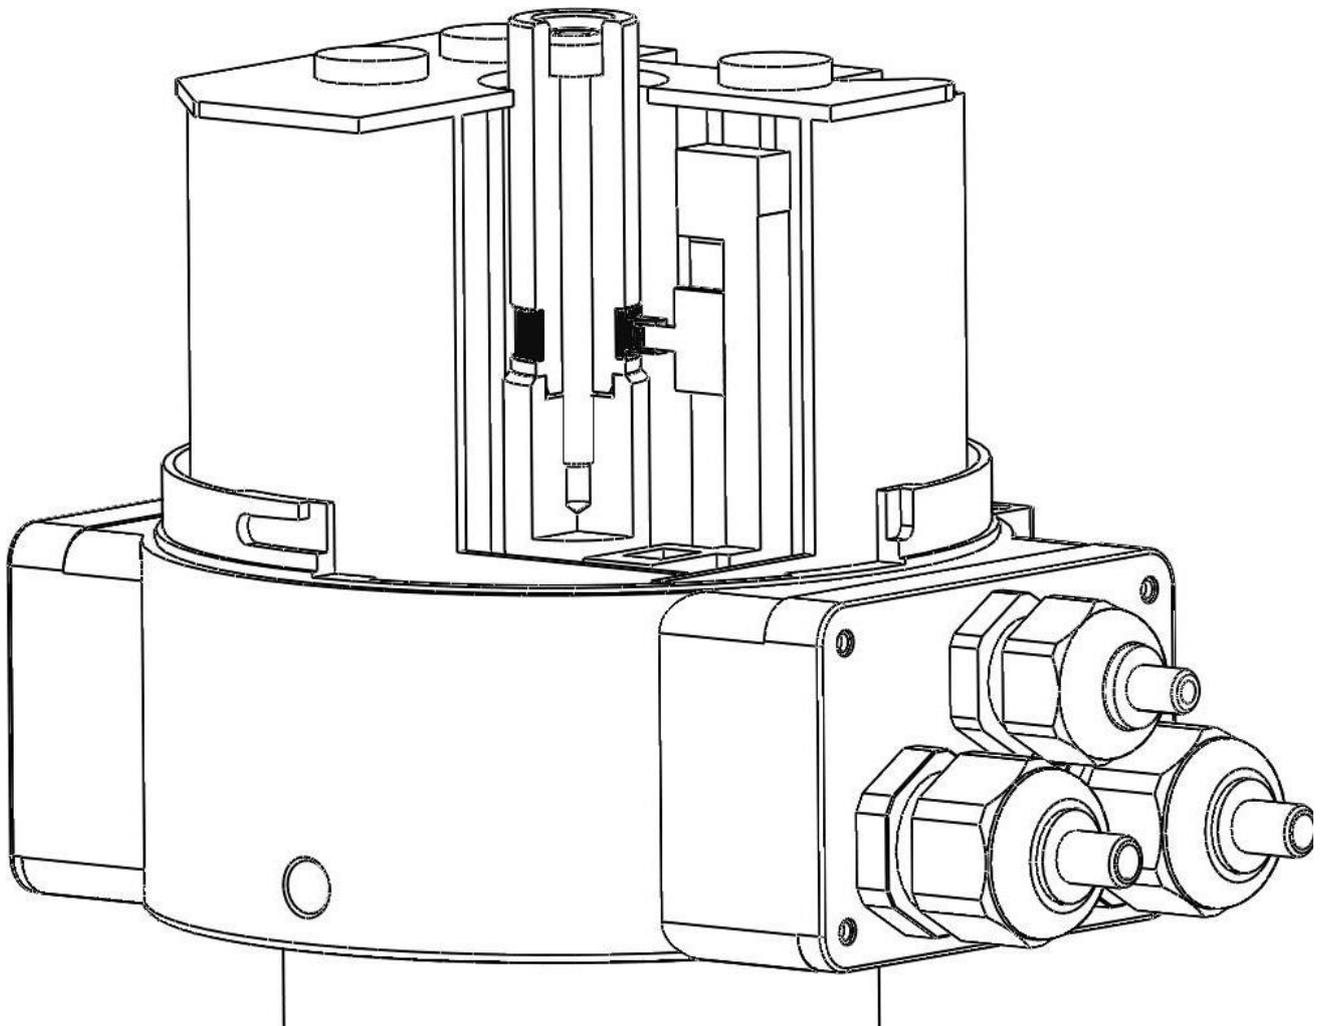

IMPORTANT: Before starting any work on the box, it is important to ensure that the mains supply is switched off, that the air supply is closed and that the circuit is purged.

- Supply air to the actuator so you can lift the stem/detection cam assembly [47-50] and access the clip retainer [49].
- After disassembling the position indicator clip retainer, unscrew the screw [46] and remove the cam/clip retainer assembly [47-49].
- Unscrew the locking screw to detach the housing [55] from the base [48] taking care not to damage the seal [52].
- Unscrew the screws [53] to disassemble the base [48].
- Using the turning flats, remove the stem [50].

4.2 REASSEMBLING THE 8630 UNIT

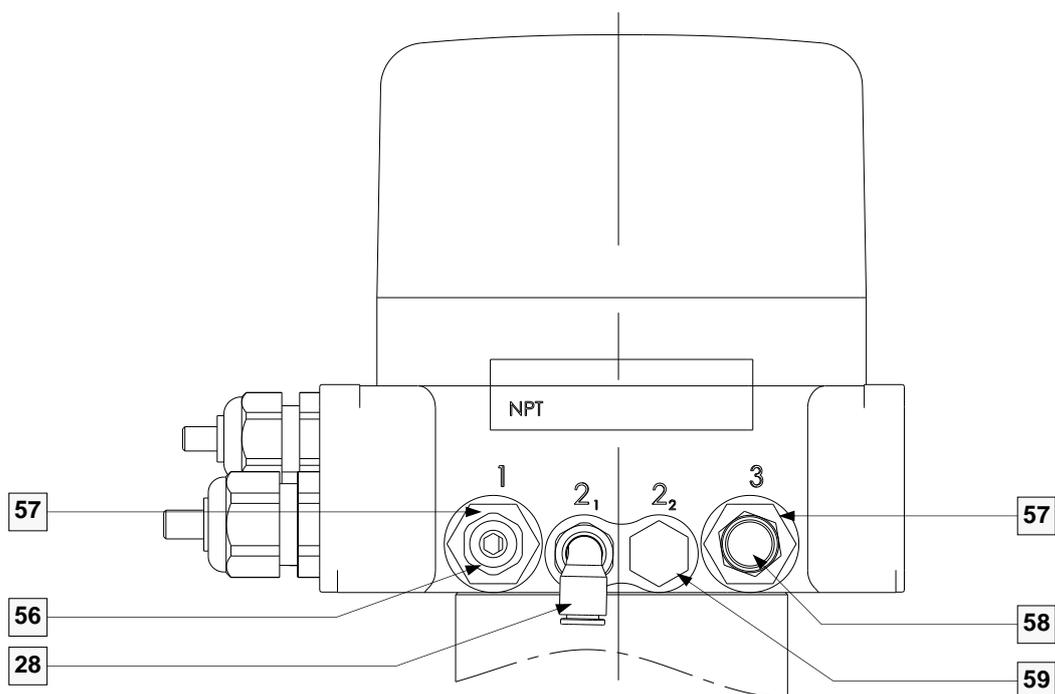

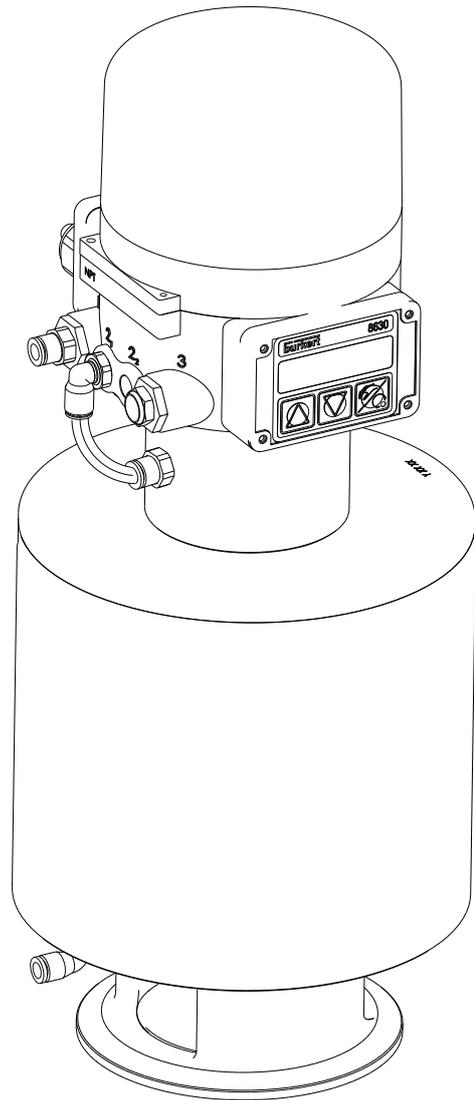

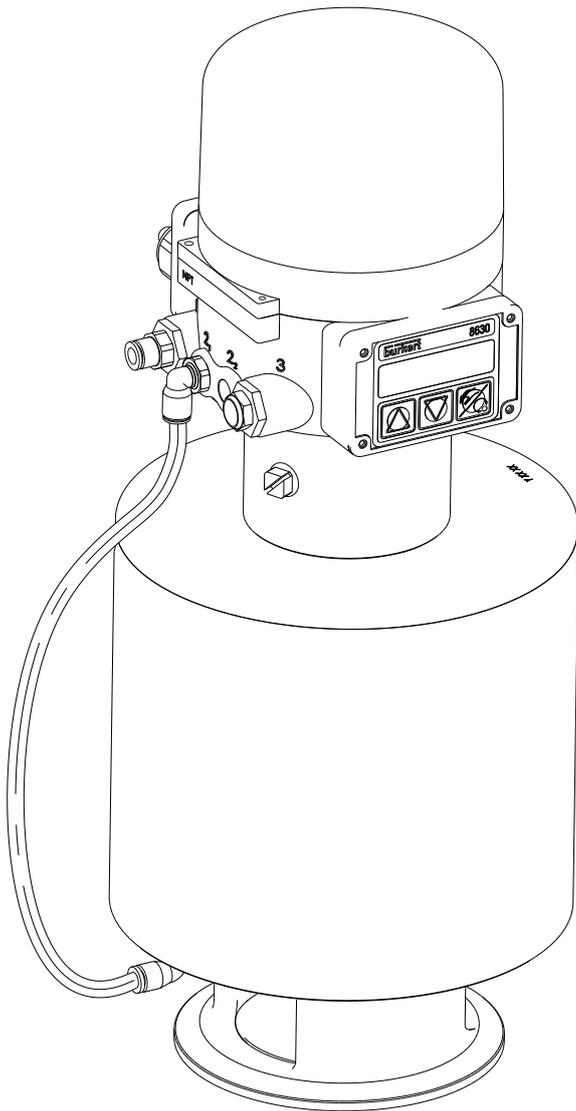

- Refit the stem [50] and lock it in place using the turning flats.
- Attach the base [48] using the screws [53].
- Position the housing [55] on the base [48] taking care not to damage the seal [52].
- Supply air to the actuator so you can lift the stem/detection cam assembly [47-50] and access the clip retainer [49].
- Fit the clip retainer [49] with the position indicator.
- After fitting the clip retainer with the position indicator, tighten the screw [46] to lock the detection cam [47] in place.
- Lock the housing [55] in place using the locking screw.
- Fit the connector ([41] or [56] depending on whether the actuator is NC or NO) onto the base [48].

4.3 CONNECTING THE AIR SUPPLY TO THE 8630 UNIT

NC assembly

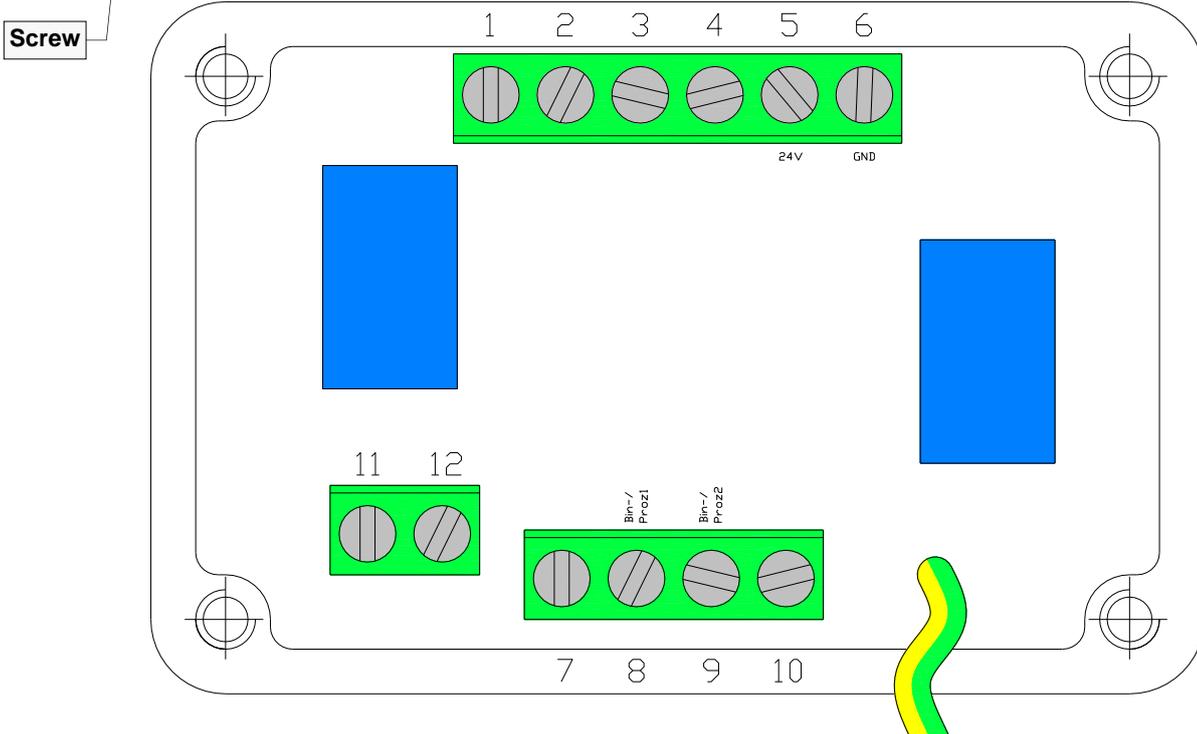

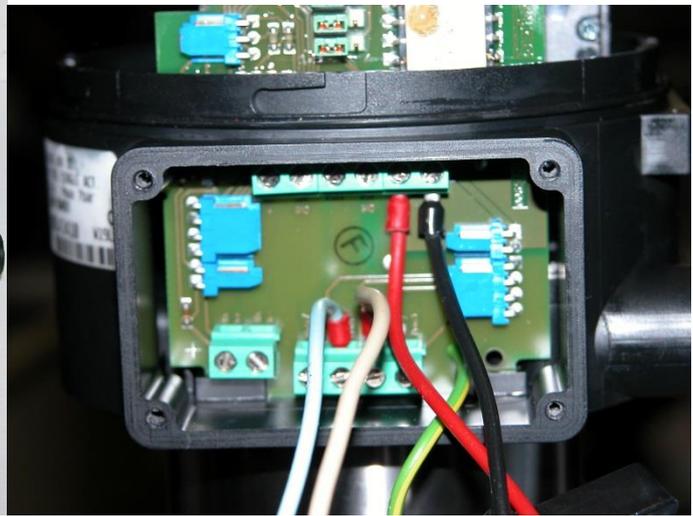

NO assembly

4.4 CONNECTING THE POWER SUPPLY REGULATOR OPERATION

The signal from a temperature sensor or level, flow, which through with the control box of the valve that controls it (Regulator mode).

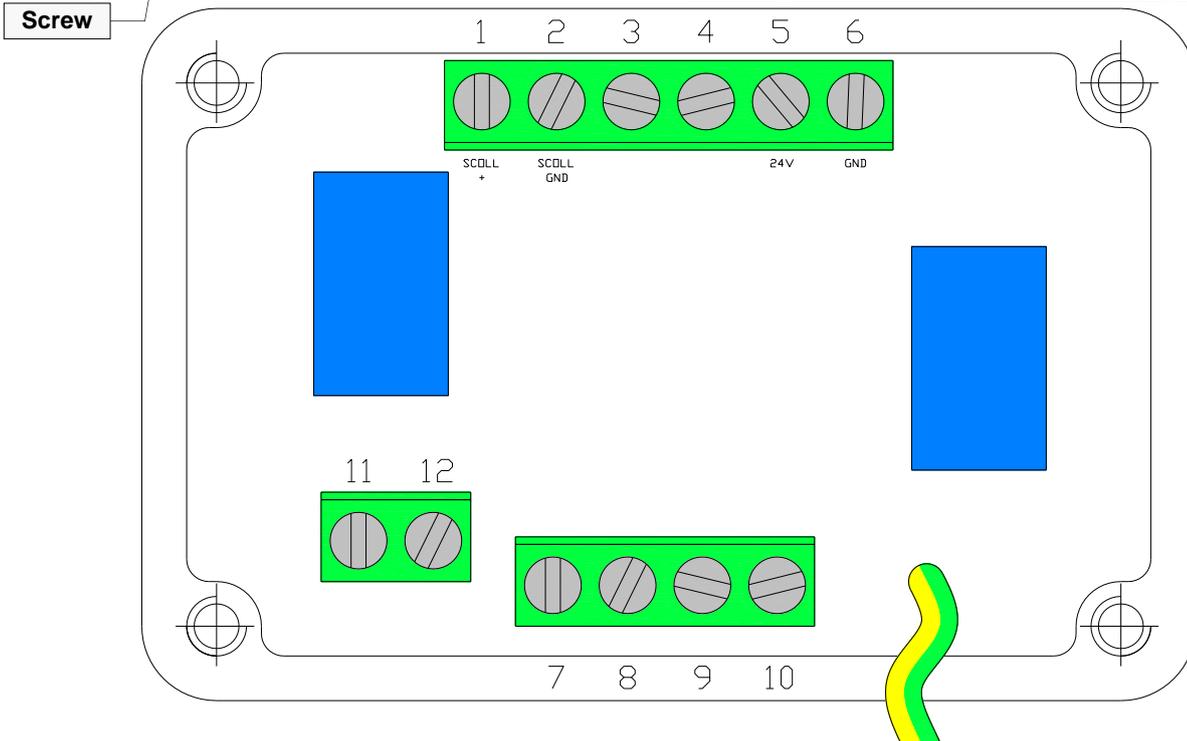

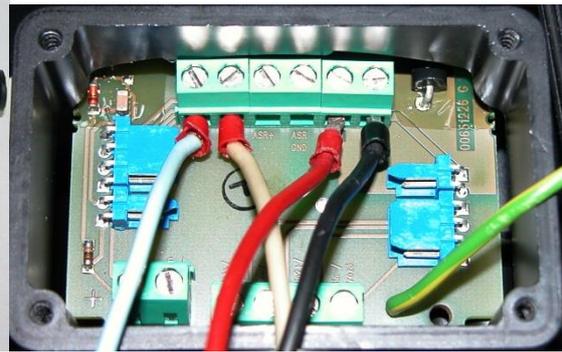

- Remove the 4 screws from the electrical connection box using a flat screwdriver.
- Connect the 24VDC+ wire (red) to 24V [5]
- Connect the 24VDC- wire (black) to GND [6]
- Connect the 4-20mA+ wire (blue) to bin-/Proz1 [8]
- Connect the 4-20mA- wire (white) to bin2+/Proz2 [9]

4.5 CONNECTING THE POWER SUPPLY POSITIONER OPERATION

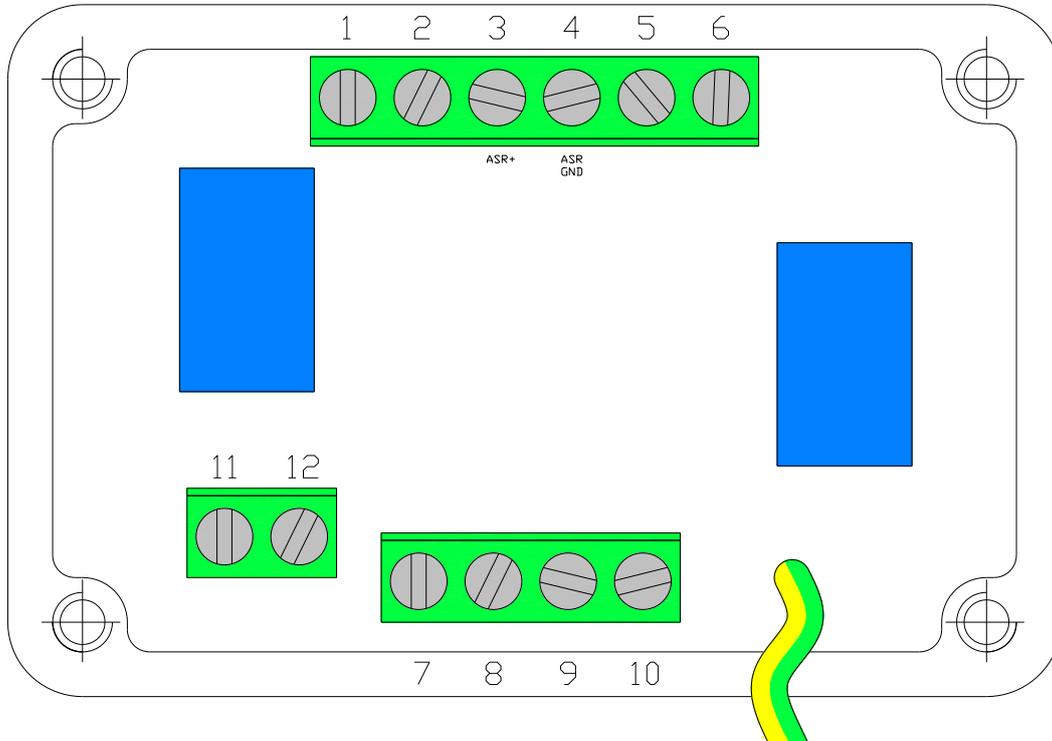

The signal from a temperature sensor or level meter, etc... between the controller which controls the valve (positioner mode).

- Remove the 4 screws from the electrical connection box using a flat screwdriver.
- Connect the 24VDC+ wire (red) to 24V [5]
- Connect the 24VDC- wire (black) to GND [6]
- Connect the 4-20mA+ wire (blue) to SCOLL + [8]
- Connect the 4-20mA- wire (white) to SCOLL GND [9]

4.6 CONNECTING POWER (analog card)

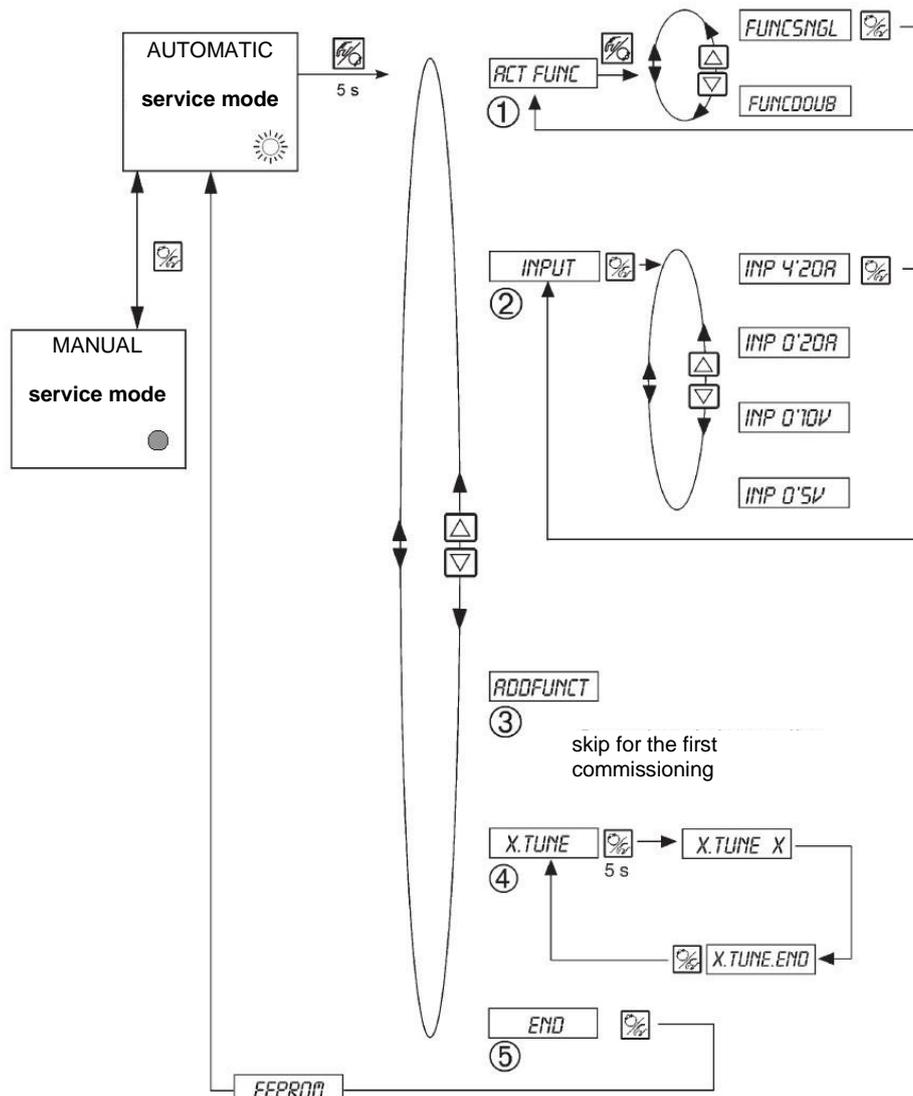

- Remove the 4 screws from the electrical connection box using a flat screwdriver.
- Connect the 4-20mA+ wire to ASR+ [3].
- Connect the 4-20mA- wire to ASR GND [4].

4.7 SETTING THE VALVE REGULATOR OPERATION

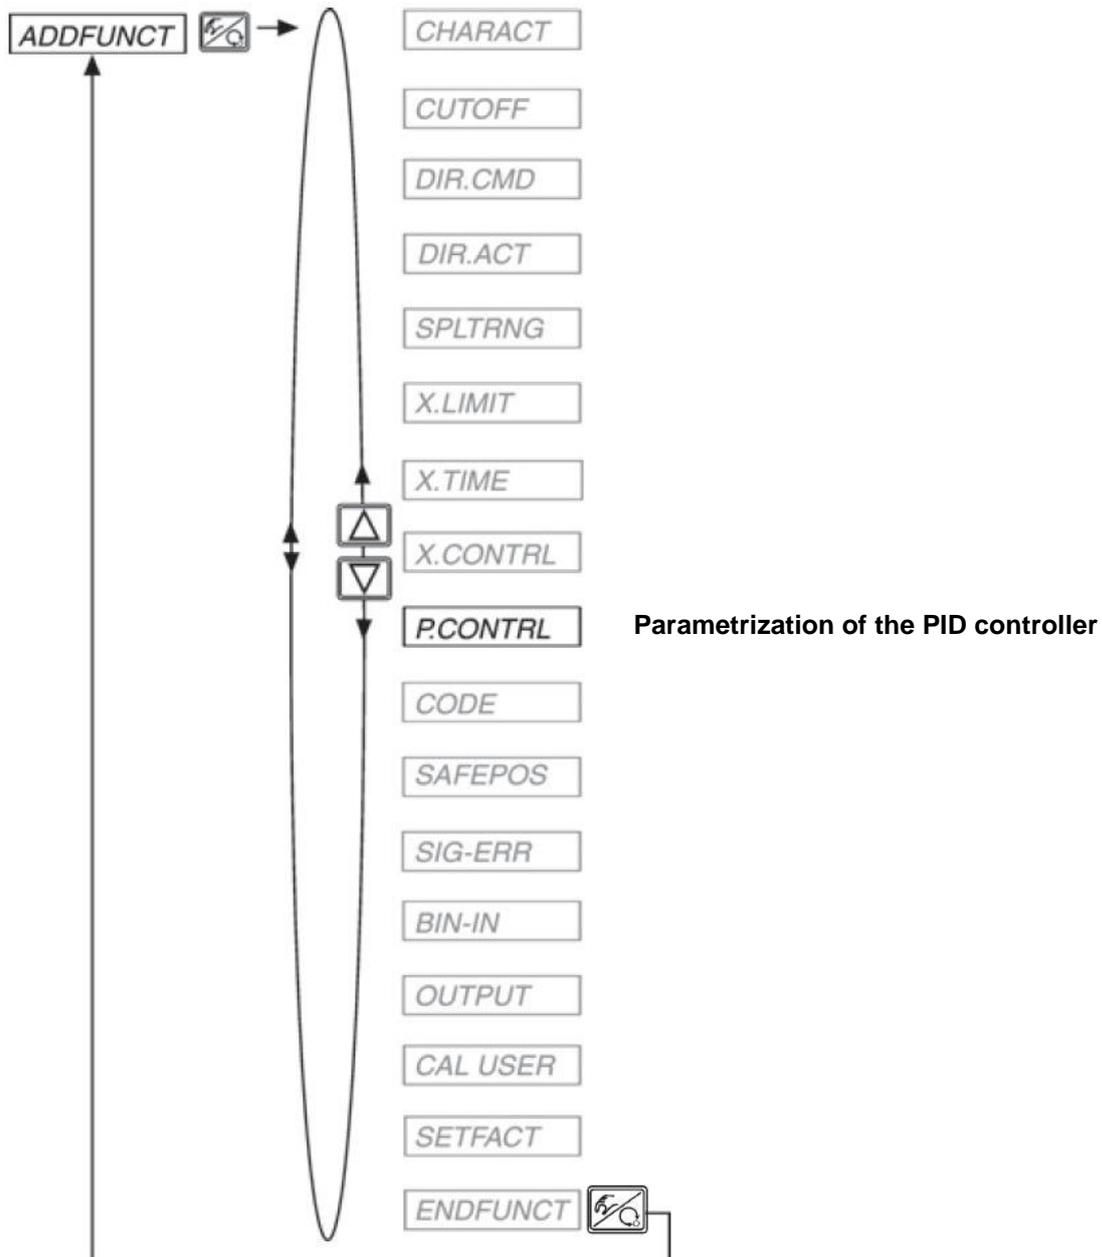

- Press once on the button on the right of the box's display to put it in auto mode (the yellow light flashes).
- Hold down the button on the right of the display for five seconds to access the main menu.
- Select the ACTFUNC function using the arrows, confirm with the button on the right and select the FUNCSNGL function. Then confirm.
- Select INPUT and confirm. Then choose 4'20A and confirm.
- Select X.TUNE and hold down the button on the right for five seconds.
- X.TUNE X then searches for and adjusts its position. The yellow light flashes rapidly.
- When TUNE END appears, confirm. Select END (KXX.) and then confirm.

8630 positioner display

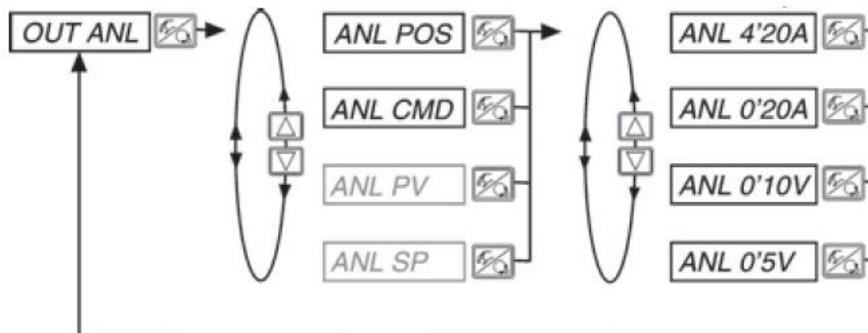

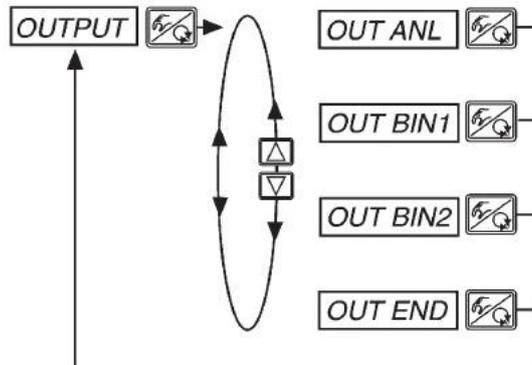

4.8 SETTING THE VALVE POSITIONER OPERATOR

- Same as the valve régulator positioner for functions ACTFUNC, INPUT, X.TUNE.
- Then go to ADDFUNCT and uncheck P.CONTRL then placed before the star disappears.
- Exit menu with ENDFUNCT.

4.9 **SETTING THE VALVE (analog card)**

- For the feedback signal OUTPUT must be in the main menu.
- Select OUTPUT then go OUT ANL, choice (in our case) ANL POS ans select ANL 4'20A.
- Exit menu with OUT END.

5 MAINTENANCE OF THE VALVE FOR POSITIONER BURKERT 8693

Before starting the disassembly procedure, if the valve is fitted with a signalling box it may be necessary to detach the signalling unit from the actuator.

5.1 DISASSEMBLING THE 8693 UNIT

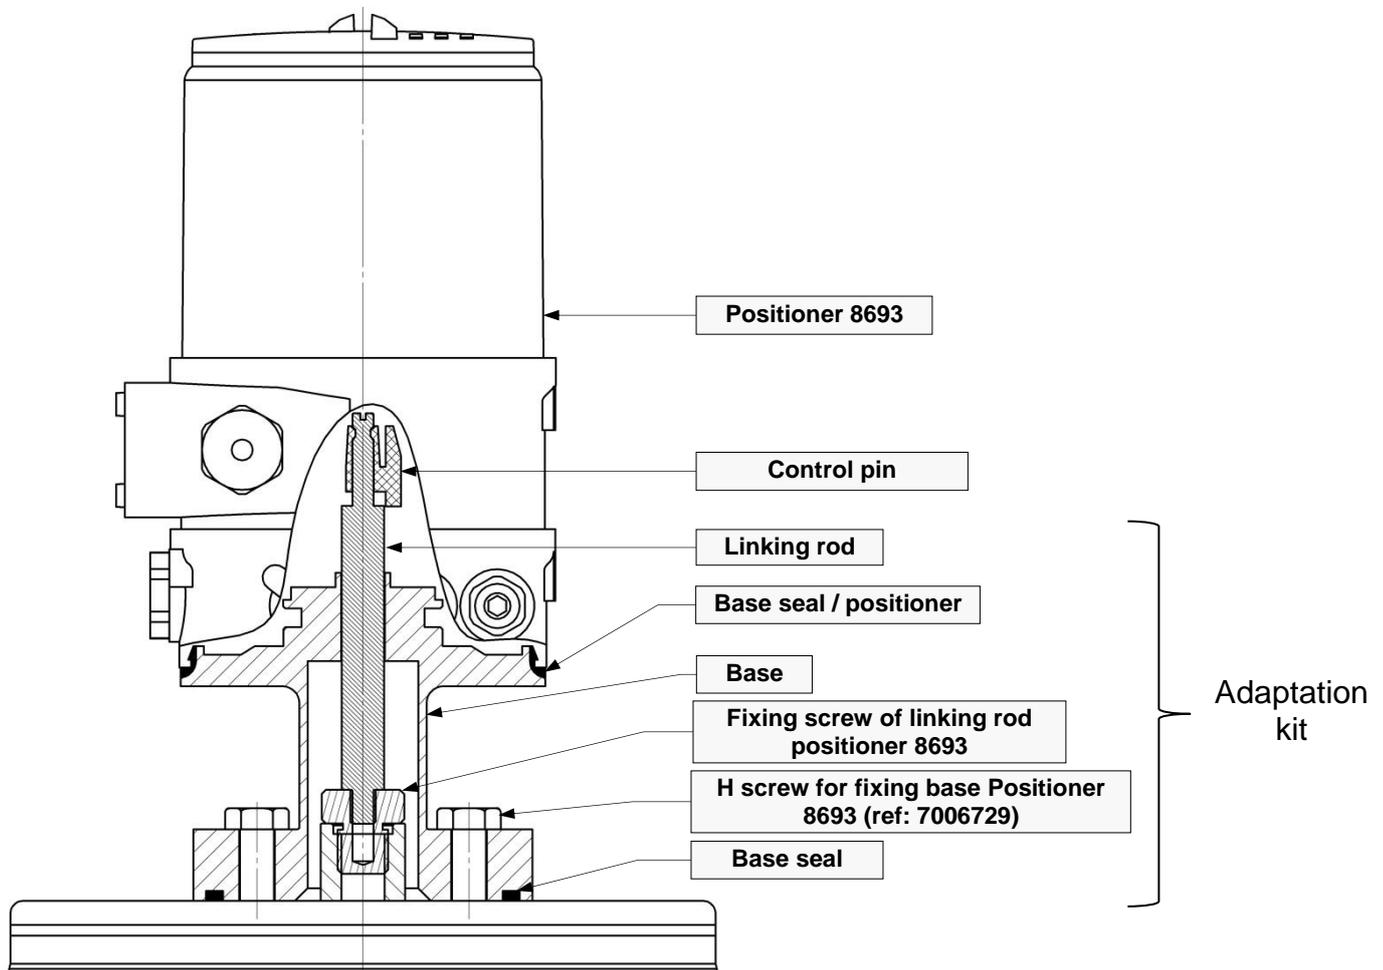

Dismantling without disconnection

IMPORTANT: Before starting any work on the box, it is important to ensure that the air supply is closed and that the circuit is purged.

Dismantling with disconnection

IMPORTANT: Before starting any work on the box, it is important to ensure that the mains supply is switched off, that the air supply is closed and that the circuit is purged.

- Unscrew the locking screws to separate the base of the housing taking care not to damage the seals of the base and the control pin.
- Remove the control pin of the linking rod.
- Unscrew the 2 screws H (ref: 7006729) to disassemble the base.
- Unscrew the linking rod.

5.2 REASSEMBLING THE 8693 UNIT

- Screw the linking rod by putting a drop of LOCTITE 222 threadlocker on the thread.
- Refit the base using the 2 screws H (ref: 7006729).
- Attach the control pin on the linking rod.
- Lock the housing on the base by using the locking screws taking care not to damage the seals of the base and the control pin.
- Fit the connector depending on whether the actuator is NC or NO onto the base.

5.3 CONNECTING THE AIR SUPPLY TO THE 8693 UNIT

NC assembly

NO assembly

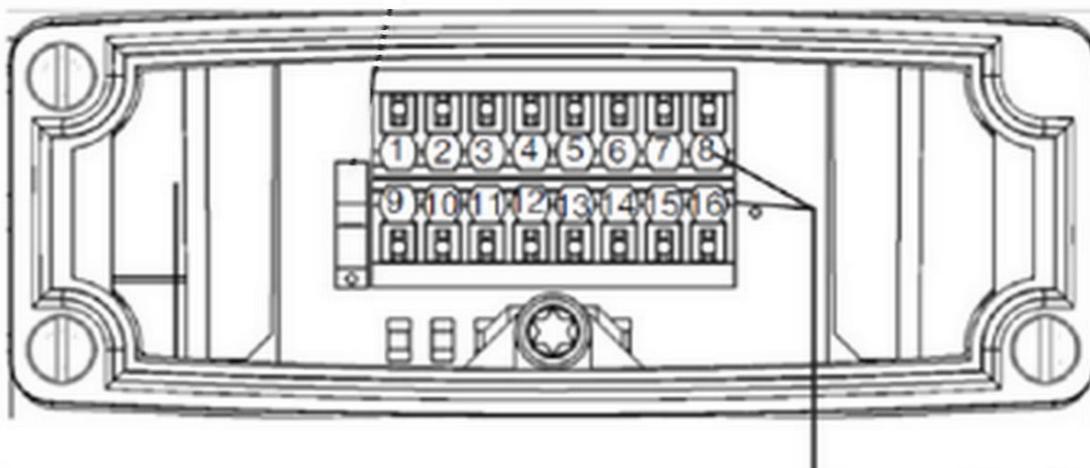

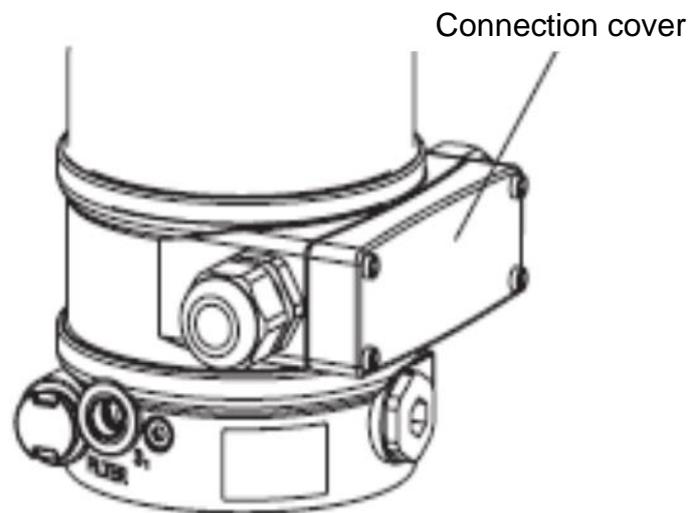

Connector	Designation
1	Supply air
3	Escapement with silencer
2.1	Air outlet to the control valve
2.2	Stopper

5.4 **CONNECTING THE POWER SUPPLY REGULATOR OPERATION (without 4-20mA generator)**

The signal from a temperature sensor or level, flow, which through with the control box of the valve that controls it.

- Remove the 4 screws from the electrical connection box using a flat screwdriver and remove the connection cover.
- Pushing the son through the screw grommet.
- Connect the + 24VDC wire to + 24VDC [16].
- Connect the 24VDC- wire to GND [15].
- Tighten the nut of the screw grommet (torque approx. 1.5 Nm).
- Reinstall the connection cover with the inserted seal and screw crosswise screws of housing (torque maximum 0.7 Nm.).

5.5 SETTING THE VALVE AUTOMATIC OPERATION

Display elements of the process level:

X.CO Symbol for position control

P.CO Symbol for process control

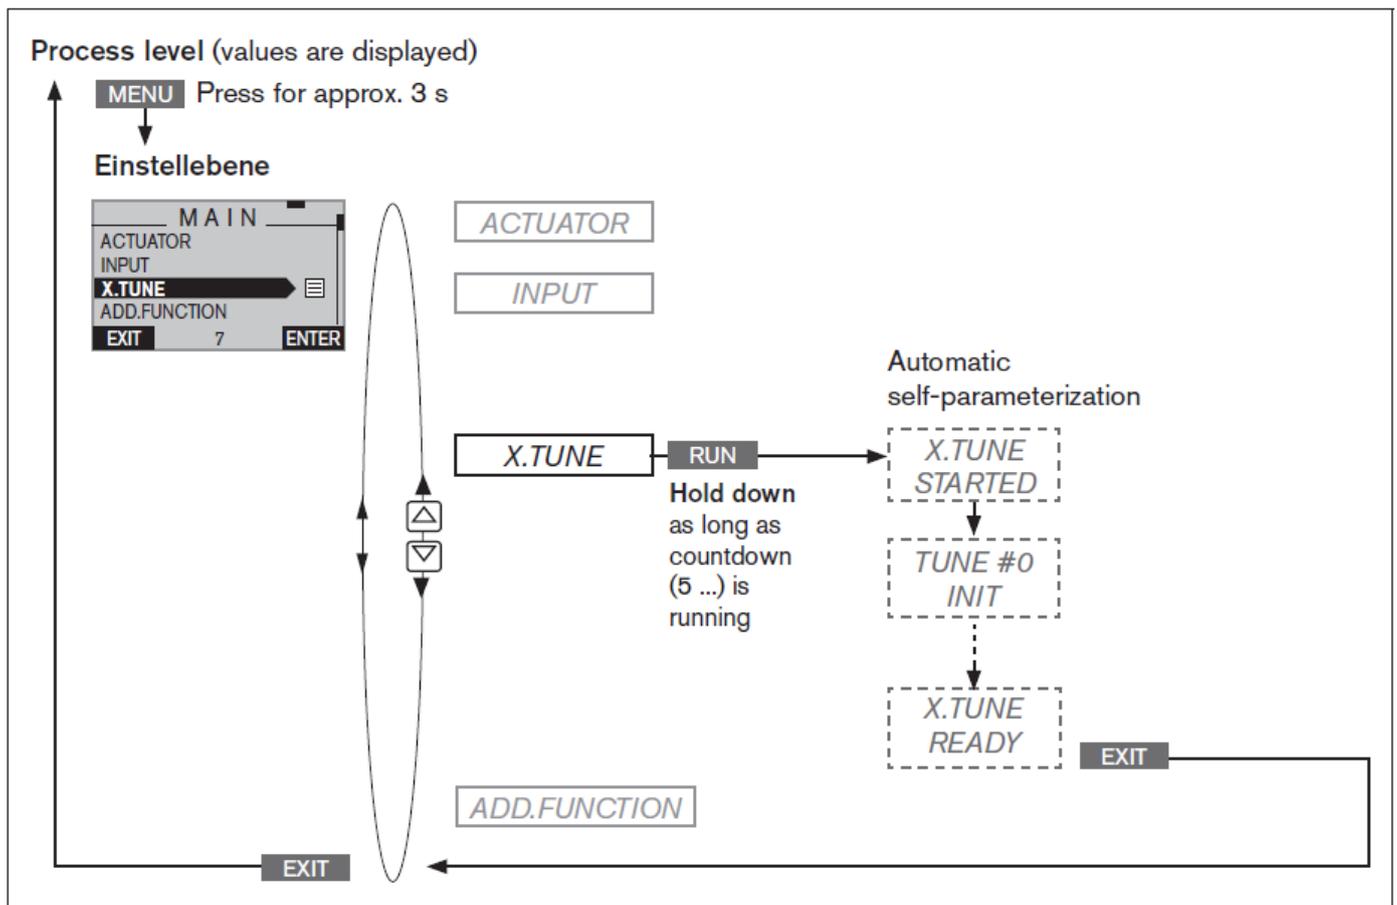

AUTO Symbol for the AUTOMATIC operating state

Other symbols are displayed according to the activated functions.
See operating instructions type 8692/8693

5.5.1 AUTOMATIC ADJUSTMENT OF THE POSITIONER TO THE OPERATING CONDITIONS (X.TUNE)

Key	Action	Description
MENU	Press  for approx. 3 s	Switching from process level \Rightarrow setting level
$\blacktriangle / \blacktriangledown$	Select X.TUNE	
RUN	 Hold down as long as countdown (5 ...) is running	During the automatic adjustment messages are displayed indicating the progress of the X.TUNE "TUNE #1... X.TUNE ready" ¹⁾ .
	Press any key	Return to main menu (MAIN)
EXIT	Press 	Switching from setting level \Rightarrow process level

Possible error messages when running X.TUNE:

Display	Causes of error	Remedial action
TUNE err/break	Manual termination of self-parameterization by pressing the EXIT key	
X.TUNE locked	The X.TUNE function is blocked	Input access code
X.TUNE ERROR 1	No compressed air connected	Connect compressed air
X.TUNE ERROR 2	Compressed air failed during Autotune (X.TUNE).	Check compressed air supply
X.TUNE ERROR 3	Actuator or control system deaeration side leaking	Not possible, device defective
X.TUNE ERROR 4	Control system aeration side leaking	Not possible, device defective
X.TUNE ERROR 6	The end positions for POS-MIN and POS-MAX are too close together	Check compressed air supply
X.TUNE ERROR 7	Incorrect assignment POS-MIN and POS-MAX	To determine POS-MIN and POS-MAX, move the actuator in the direction indicated on the display.

5.5.2 **SETTING UP THE PROCESS CONTROLLER (auxiliary function P.CONTROL)**

Key	Action	Description
MENU	Press  for approx. 3 s	Switching from process level ⇔ setting level.
▲ / ▼	Select <i>ADD.FUNCTION</i>	
ENTER	Press 	The possible auxiliary functions are displayed.
▲ / ▼	Select <i>P.CONTROL</i>	
ENTER	Press 	<i>P.CONTROL</i> is now marked by a cross ☒.
EXIT	Press 	Acknowledgment and simultaneous return to the main menu (MAIN). <i>P.CONTROL</i> is now activated and incorporated into the main menu.

5.5.3 BASIC SETTING OF THE PROCESS CONTROLLER

- In the main menu (**MAIN**), the function **P.CONTROL**

▲ / ▼	Select P.CONTROL	
ENTER	Press 	
▲ / ▼	Select SETUP	
ENTER	Press 	
▲ / ▼	Select SP-INPUT	
ENTER	Press 	
▲ / ▼	Select internal or external	

- Use the **EXIT** key (press 4 x) to return to the process level.
- On the process level, manually the process set-point value.

Key	Action	Description
▲ / ▼	Select the display for the process set-point value (SP)	
INPUT	Press 	

- Insert process set-point value (as shown on the right-hand image).

Enter values:

MANU	Press	
	OPN or CLS	Pos %

P.CONTROL - settings:

PID.PARAMETER	Parameterization of the process controller
DBND 0.1 %	Insensitivity range (dead band) of the PID process controller
KP 0.00	Amplification factor of the process controller
TN 0.5	Reset time
TV 0.0	Hold-back time
X0 0.0 %	Operating point
FILTER 0	Filtering of the process actual value input
SETUP	Setting up the process controller
PV-INPUT	Indication of the signal type for process actual value
PV SCALE	Scaling the process controller
SP-INPUT	Type of the set-point value default (internal or external)
SP-SCALE*	Scaling the positioner (position controller) (for external set-point value default only)
P.CO-INIT	Enables a smooth switchover between operating states AUTOMATIC and MANUAL

6 MAINTENANCE OF THE VALVE FOR POSITIONER GEMÜ 1436

Before starting the disassembly procedure, if the valve is fitted with a signalling box it may be necessary to detach the signalling unit from the actuator.

6.1 DISASSEMBLING THE 1436 UNIT

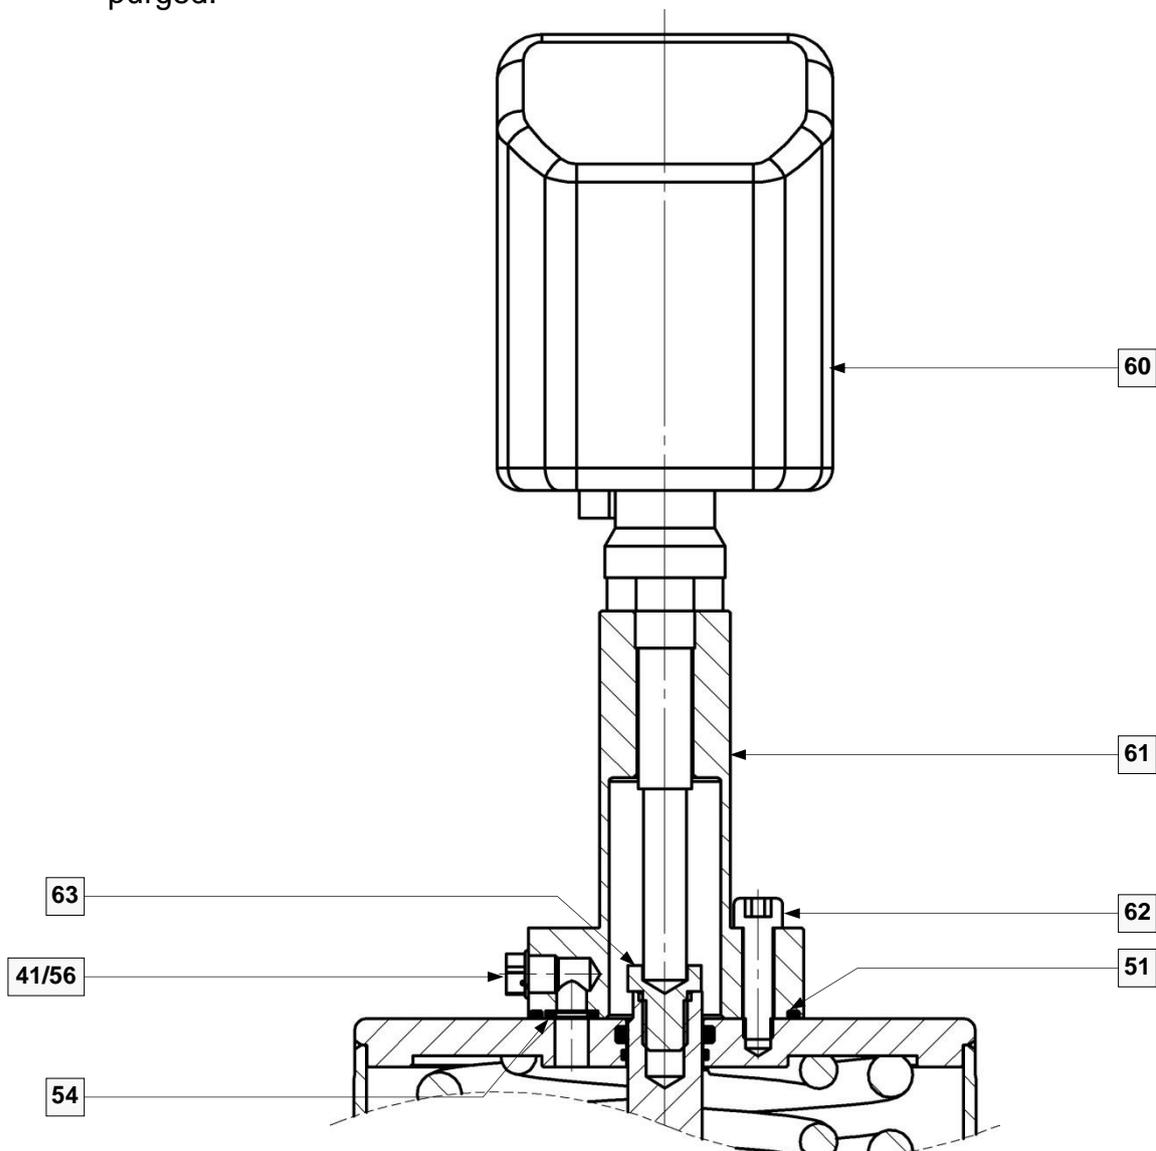

CAUTION!

Dismantling without disconnection

IMPORTANT: Before starting any work on the box, it is important to ensure that the air supply is closed and that the circuit is purged.

Dismantling with disconnection

IMPORTANT: Before starting any work on the box, it is important to ensure that the mains supply is switched off, that the air supply is closed and that the circuit is purged.

- Unscrew the screw [62] to disassemble the base [61].
- Unscrew the housing [60] to separate from the base [61].

IMPORTANT: It is imperative to first separate the base of the actuator and then unscrew the GEMÜ housing.

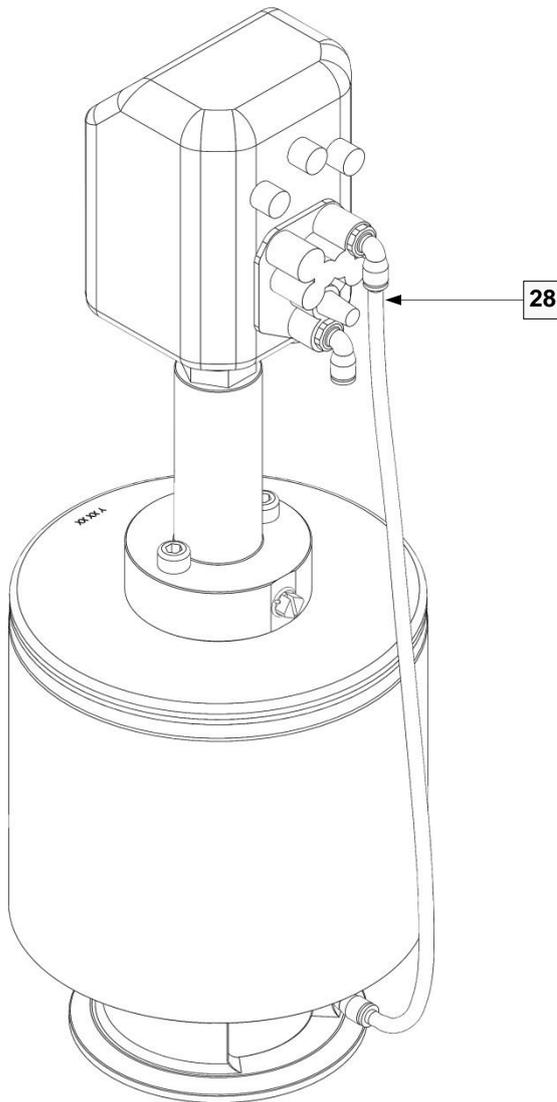

6.2 REASSEMBLING THE 1436 UNIT

- Screw the housing [60] on the base [61].
- Attach the base [61] using the screw [62].

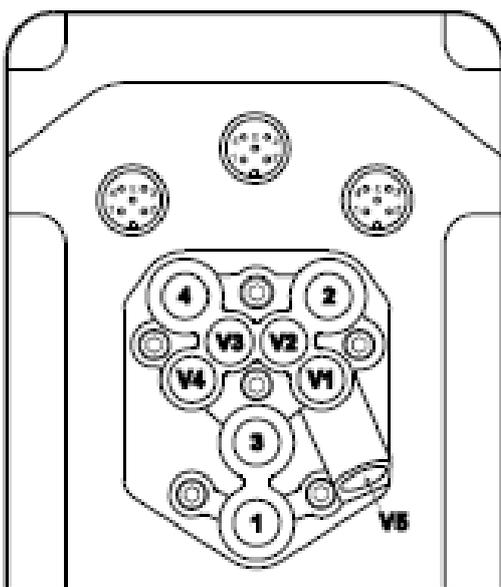

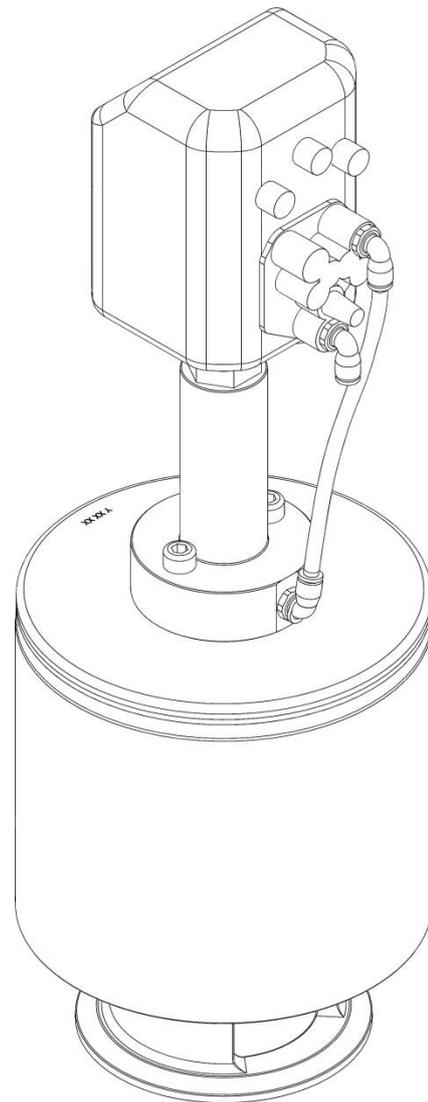

IMPORTANT: It is imperative to first pass the GEMÜ housing on the base and then to mount the base on the actuator.

6.3 CONNECTING THE AIR SUPPLY TO THE 1436 UNIT

NC assembly

- Make the connection between pneumatic positioner outlet A1 (single acting) or A1 and A2 (double acting) and the pneumatic actuator air control inlet .
- Connect the control air supply (additional air) to the air supply connection P 1 (max. 7 bar)

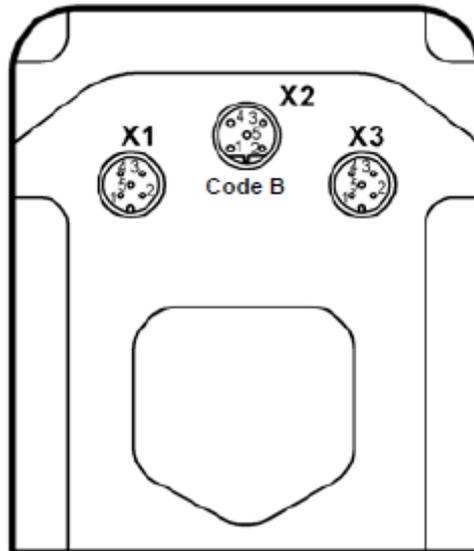

Attention: Observe maximum actuator control pressure!

6.4 CONNECTING THE POWER SUPPLY REGULATOR OPERATION

The signal from a temperature sensor or level, flow, which through with the control box of the valve that controls it (Regulator mode).

- Connect analogue input (actual value input) 0/4-20 mA to plug X3.

Connection	Pin	Signal name

Error messages during initialisation

No.	Error text	Description	Condition for the occurrence of the error	Error cause
020	Pot wrong dir Error	The potentiometer has recognised the wrong control function during initialisation.	Parameter "CtrlFn" is set to AUTO and a valve with control function 3 is recognised, from which the actuator has moved in the wrong direction. Parameter "CtrlFn" is set for a fixed control function. This set control function is not in accordance with the control function determined during initialisation.	The pneumatic connections for "CLOSED" and "OPEN" on the valve have been switched or the parameter "Pot Dir" is set on "fall". The wrong control function is set.
021	Wrong function Error	An incorrect control function was recognised during automatic initialisation.	Parameter "CtrlFn" is set for a fixed control function. This set control function is not in accordance with the control function determined during initialisation.	The wrong control function is set in the "CtrlFn" parameter. If the parameter is set to AUTO, the 1436 cPos determines the corresponding control function and leaves it there.
022	Pneumatic Error Error	During automatic initialisation of the valve a pneumatic error was detected.	<ul style="list-style-type: none"> ● The minimum stroke was undershot ● End positions cannot be reached ● Leakage in the system 	Check the stroke of the pneumatic system. Check leakage and end positions.
023	Leakage Error	During automatic initialisation of the valve leakage was detected.	The positioner is in initialisation mode.	Check the pneumatic system for leakage and carry out initialisation again.
060	TrvlSensErr Error	A cable break or short-circuit in the sensor connection (travel sensor) was detected.		Cable break or short-circuit in the sensor connection (travel sensor) detected.

6.6 **SETTING THE VALVE POSITIONER OPERATOR**

Set the type of external set-point (0 / 4-20mA) **W-Input** setting.

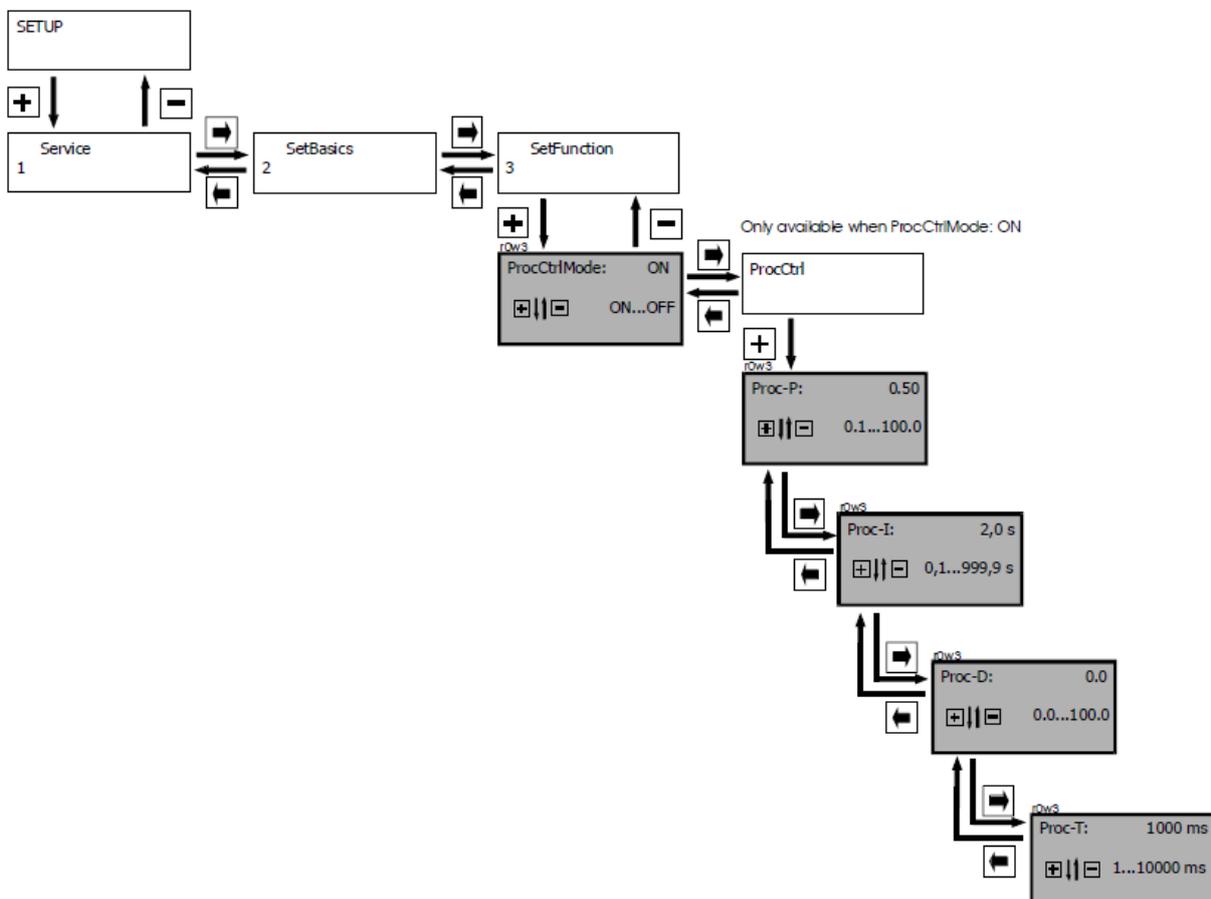

6.7 **SETTING THE VALVE REGULATOR OPERATION**

Set the type of external set-point (0 / 4-20mA) to the parameter **W-Input**.
Set the type of external real value (0 / 4-20mA) to the parameter **X-Input**.

If it functions as a process controller, set the parameter **ProcCtrlMode** to On.

Now start to adjust the PID parameters for the control system.

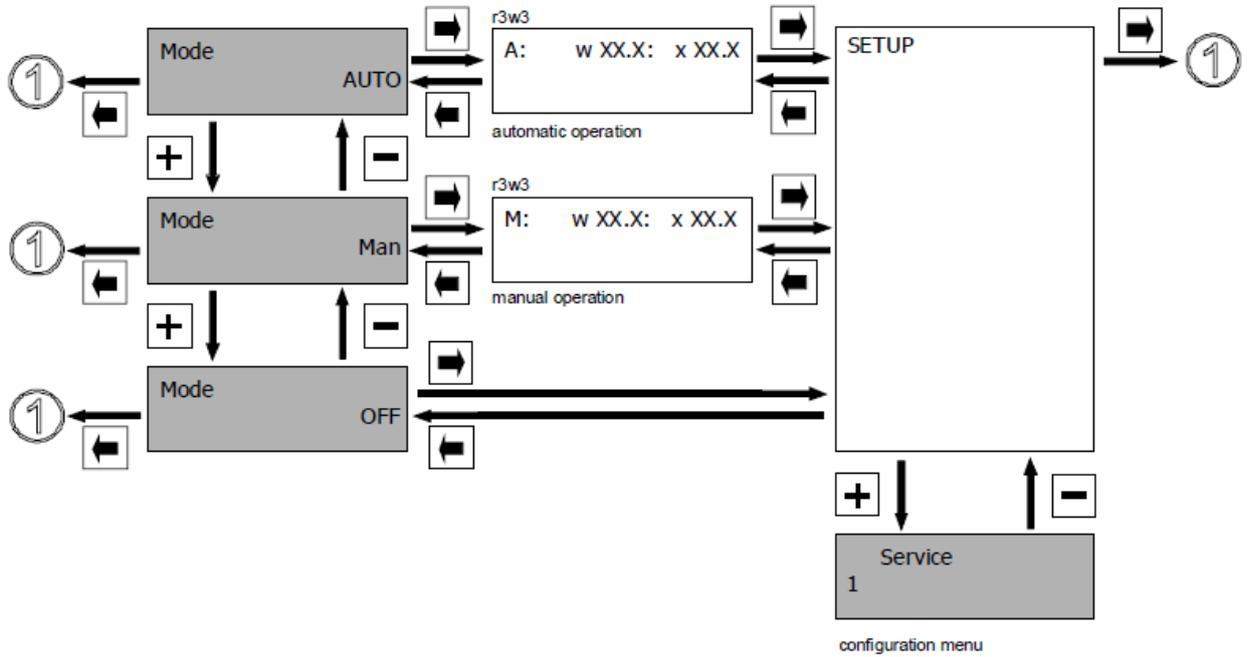

Select the menu **ProcCtrl** and set the parameters Proc-P, Proc-I, Proc-D and Proc-T according to the specific system parameters.

6.8 SETTING THE VALVE AUTOMATIC OPERATION

Operation as a positioner and process controller.

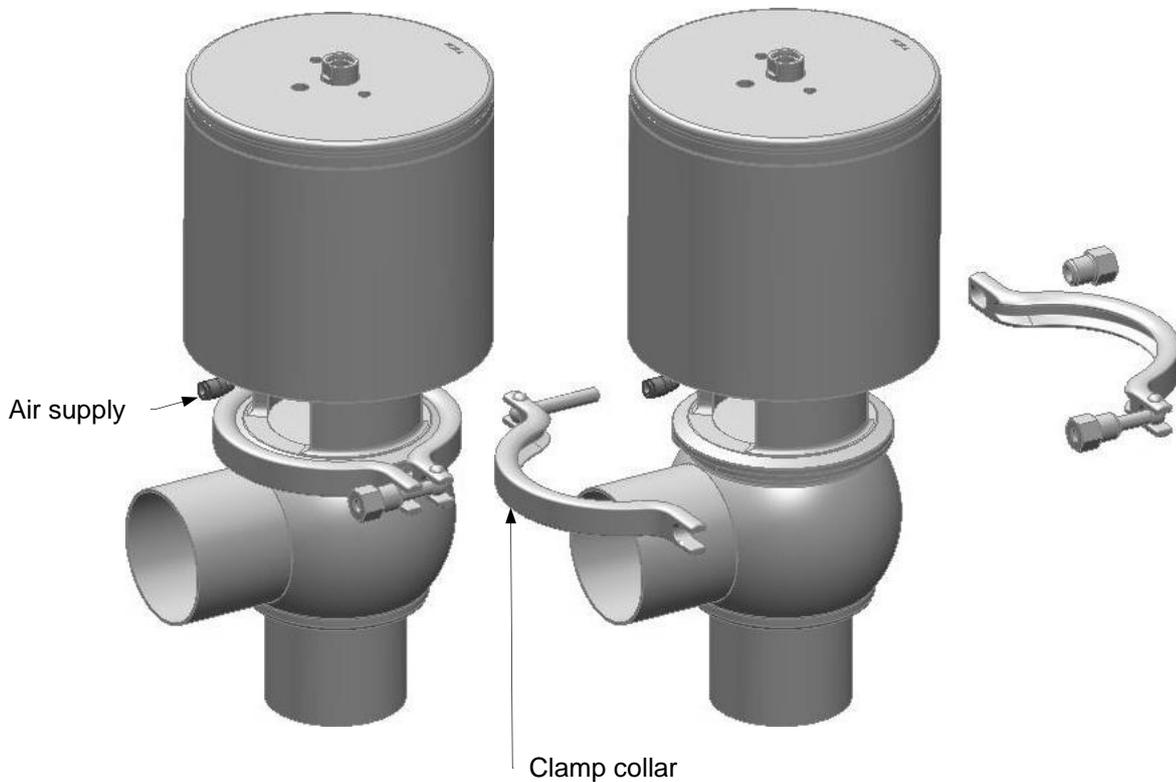

Define the setting mode on auto.

7 DISASSEMBLING THE VALVE

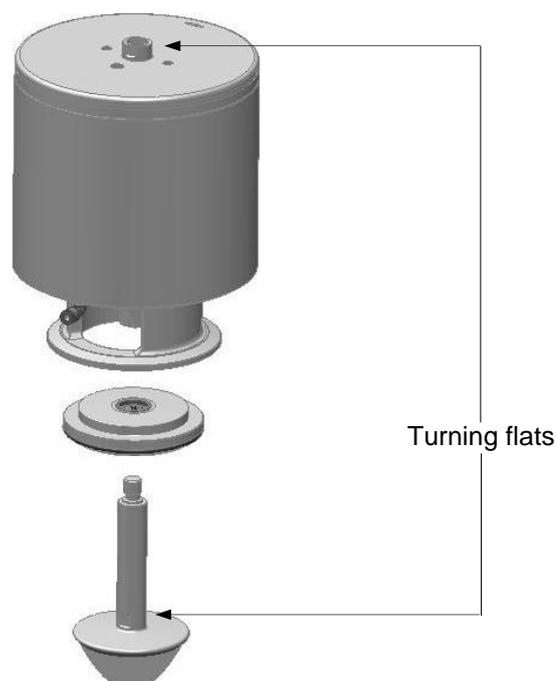

7.1 DISASSEMBLING THE DCX3 REGULATING VALVE CLAMP COLLAR

- Supply air to the NC actuator to relieve the pressure on the clamp collar from the spring.
- Disassemble the clamp collar.
- Switch off the actuator air supply.
- Remove the actuator and plug assembly from the DCX3 body.

7.2 DISASSEMBLING THE DCX3 REGULATING VALVE SHUT-OFF UNIT

- Unscrew the plug by means of the turning flats on the valve and on the actuator stem then remove the seal support plate.

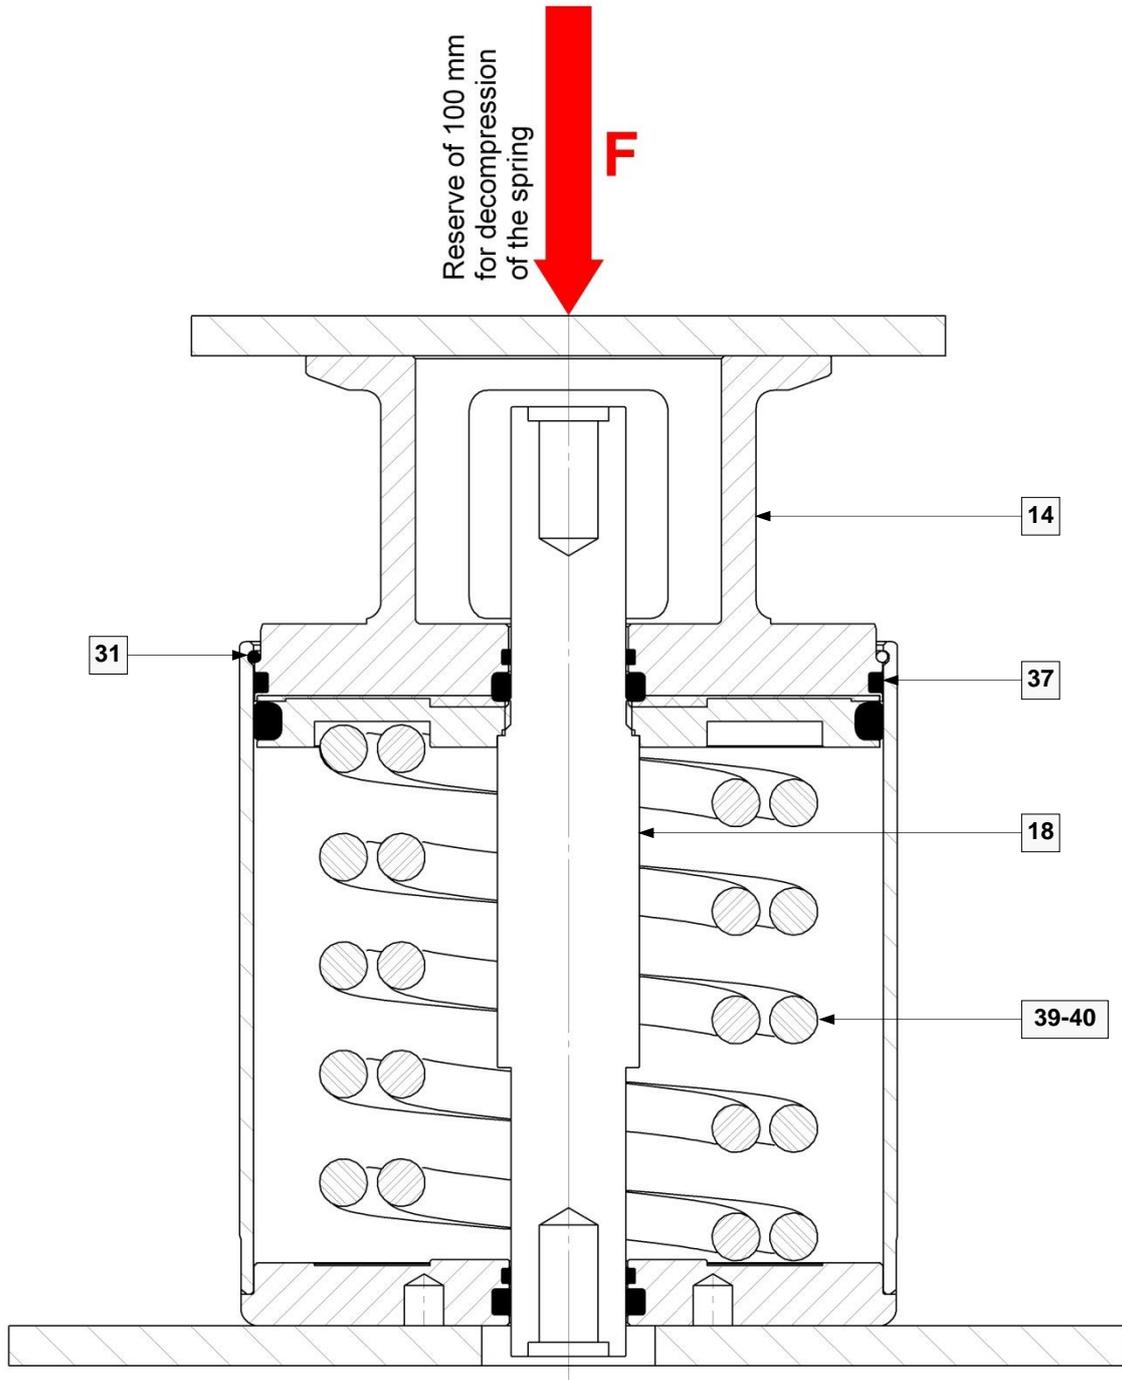

CAUTION: This is a hazardous operation if performed without using the correct tools. We recommend using a hydraulic press or a tool of the type shown in the diagram opposite (this tool must be made to accommodate a spring expansion of 100 mm).

With the actuator placed in vertically :

- Push down the lantern [14] to remove the snap-ring.
- Remove the snap-ring [31] from its recess using a small screwdriver.
- Release the pressure to allow the lantern to rise back up.
- Take out the lantern together with its seal [37].
- Remove the stem/piston [18] and the spring(s) [39-40] from the actuator body.

8 CHANGING SEALS AND REASSEMBLY

8.1 INTRODUCTION

Our valve components are listed and identified in this notice, together with all the information you need to order your spare parts.

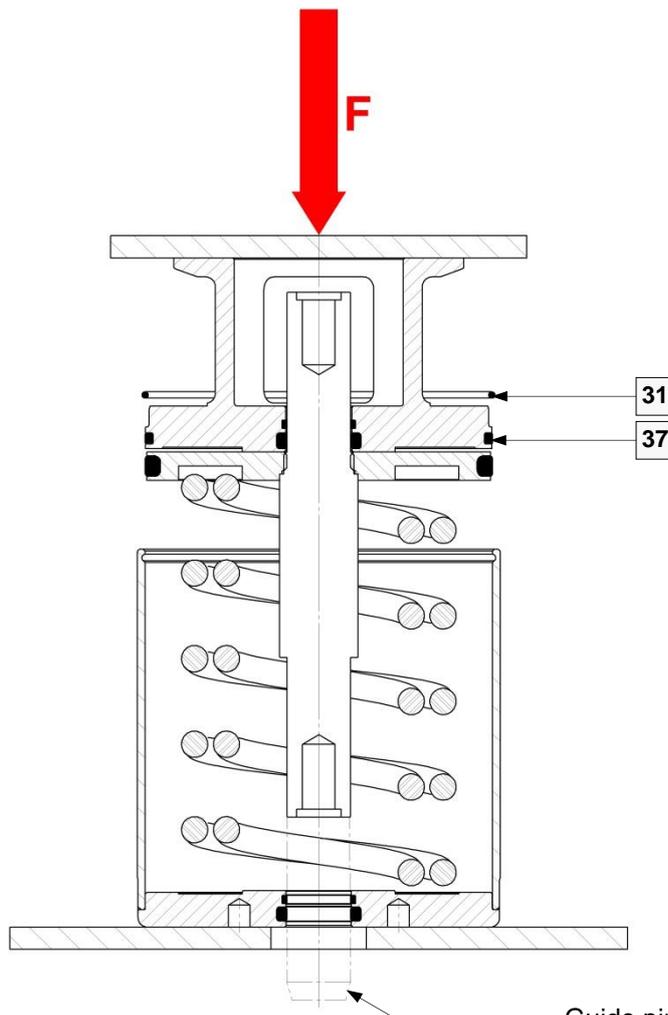

8.2 ASSEMBLING THE ACTUATOR

CAUTION: For changing the actuator configuration from **NC** (Normally Closed) to **NO** (Normally Open), see the following chapter.

CAUTION procedure is performed in the reverse order to disassembly. However, it is necessary to take into account the following information :

- A guide pin centred on the actuator stem ensures that the piston is properly centred in the body. It also avoids the piston jumping if the spring(s) slip(s) sideways during compression.
- Before reassembling the parts, ensure that the assembly is lubricated with an appropriate lubricant (water-resistant and temperature-resistant food grade grease → E.g., for information: 4025 H1 QUINPLEX by Lubrication Engineers, see § 9.10). Ensure that the grease used is compatible with the elastomer seals.
- Take care not to damage the lantern seal [37] when fitting it with the press.
- Ensure that the snap-ring [31] is properly positioned in the recess of the body before releasing pressure.
- Test operation of the actuator before continuing assembly.

Transforming an **NC** actuator into a **NO**:

After opening the actuator, refit the stem/piston and spring assembly the other way around in the body.

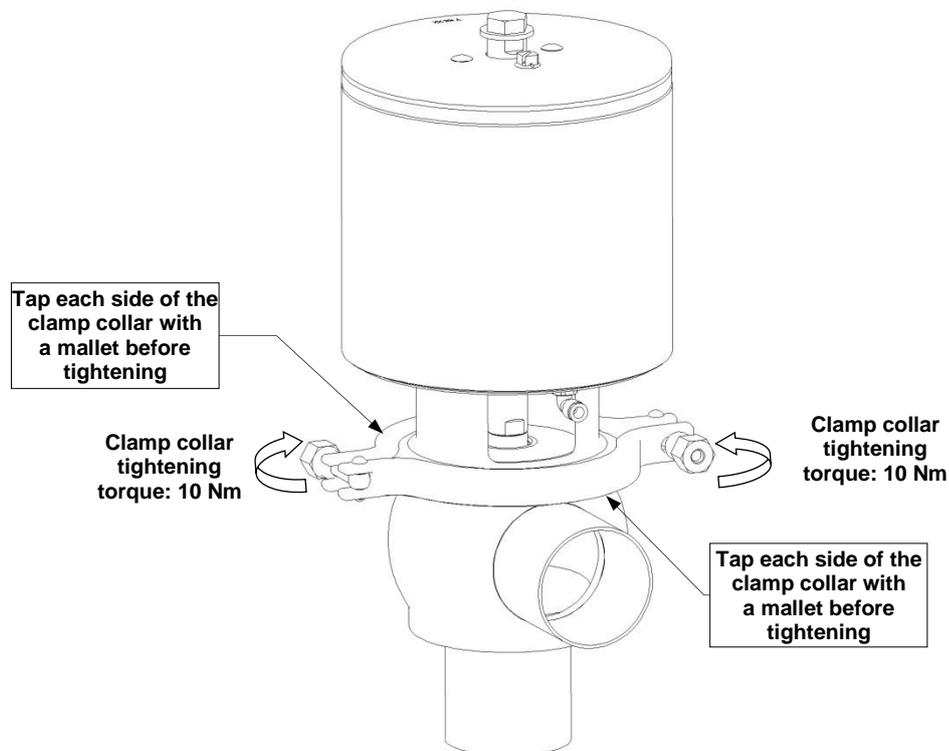

NOTE !

NOTE: For your own safety, check that the snap-ring is properly positioned in its recess. If the snap-ring is damaged or deformed, it must be replaced.

8.4 REASSEMBLING THE VALVE

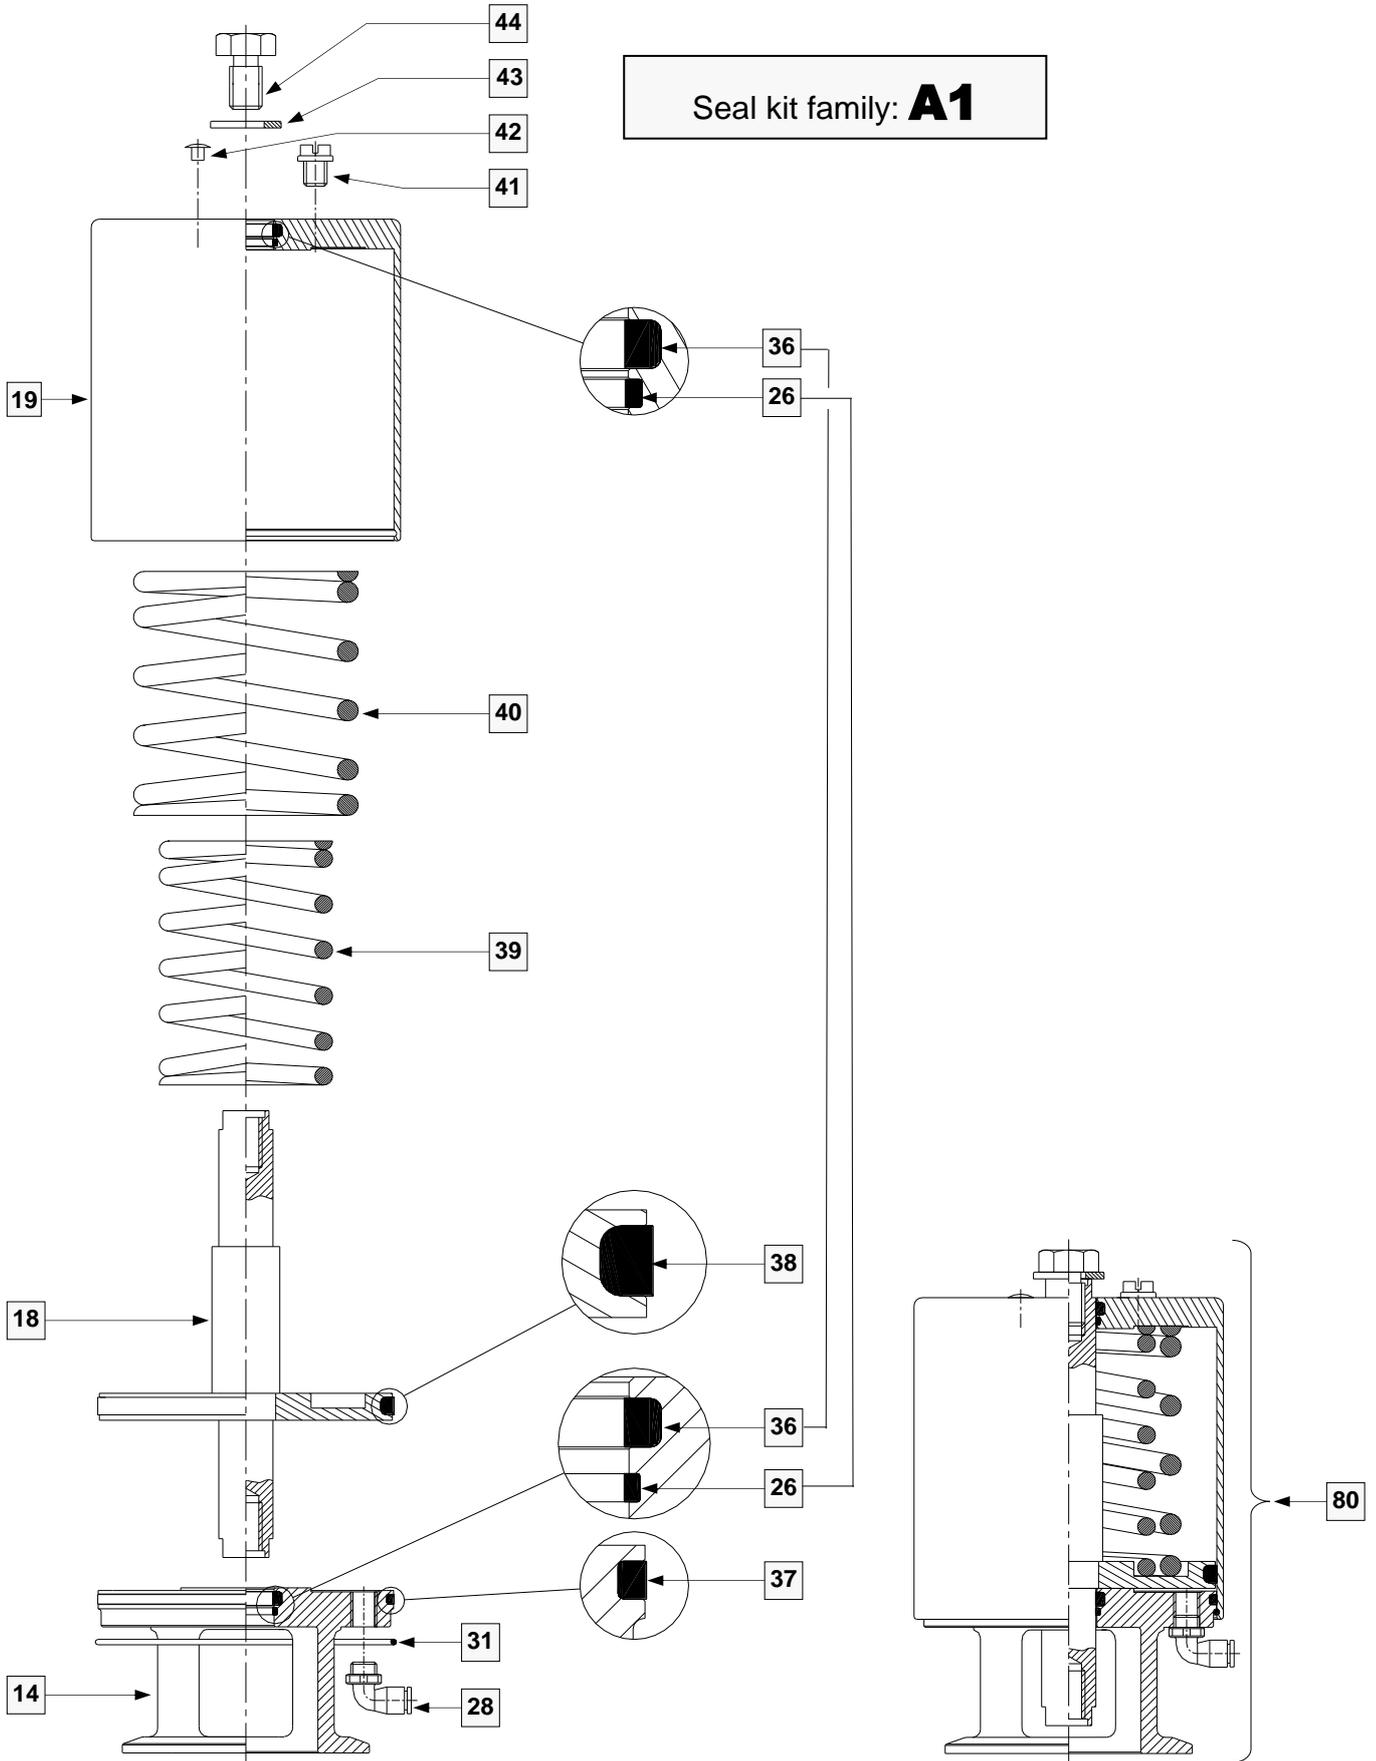

This procedure is performed in the reverse order to dismantling. You should follow the guidelines given below:

- We recommend using a **medium thread lock compound** to lock the plug during reassembly on the actuator and retightening the plug of diaphragm valves after first usage with temperature.
- Do not forget to supply air to the actuator before tightening the clamp collars.
- Before making the final network connections, check that the valve is operating normally. If you encounter problems when carrying out the operations described above, do not hesitate to contact us.
- You can also contact us regarding maintenance for your valves either on-site or at our own premises.

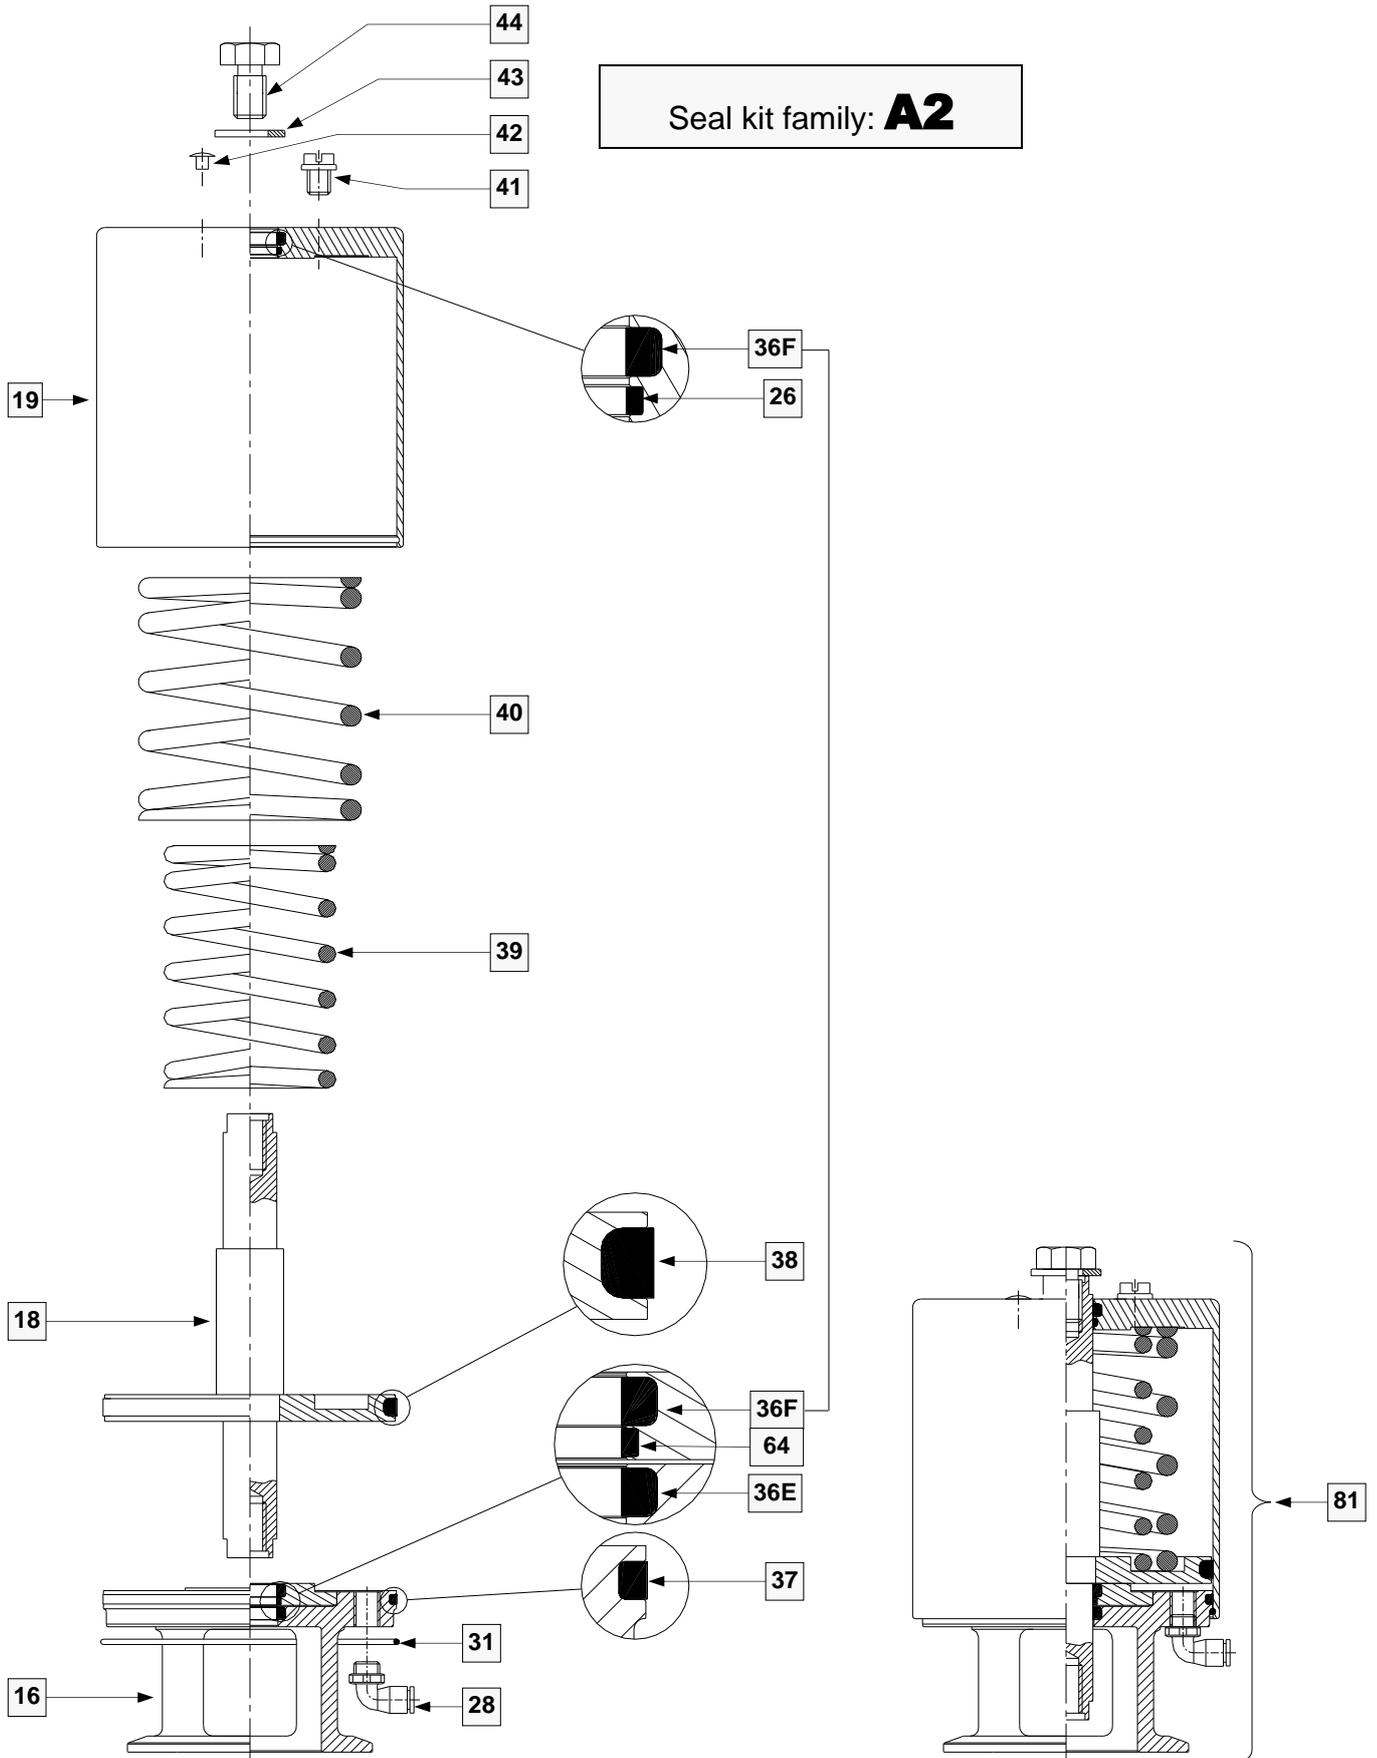

9 PARTS

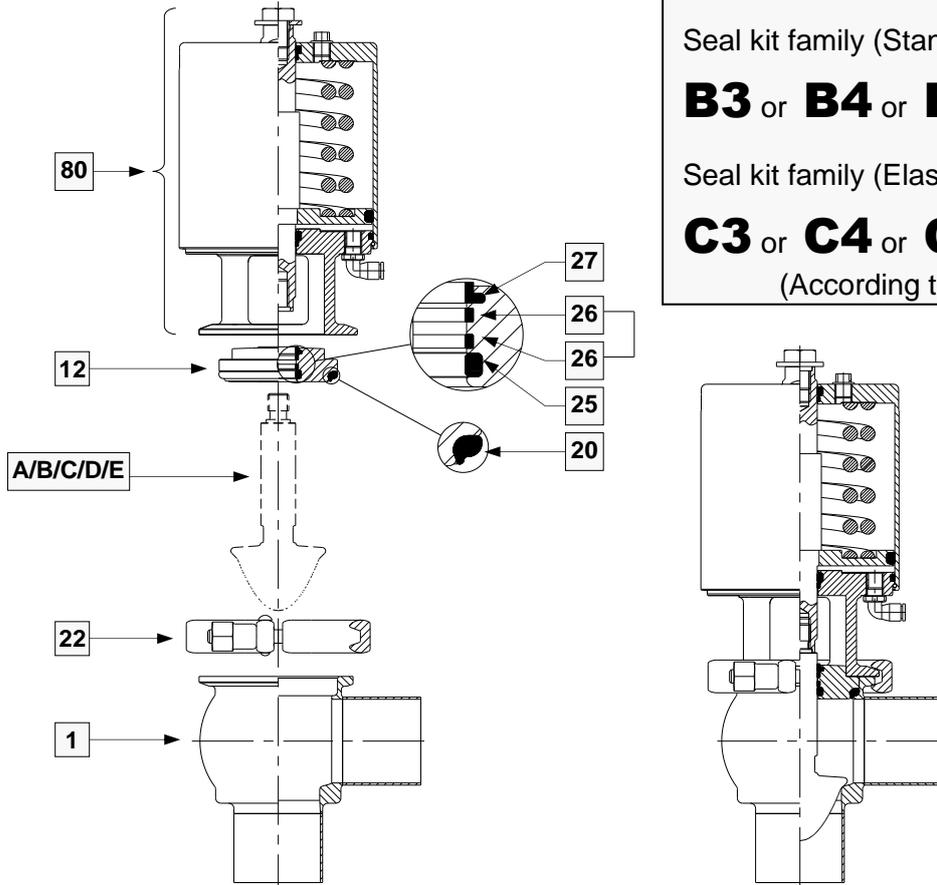

9.1 DCX3 STANDARD VALVE ACTUATOR (elastomer, diaphragm)

9.2 **DCX3 ASEPTIC SEAT VALVE ACTUATOR**

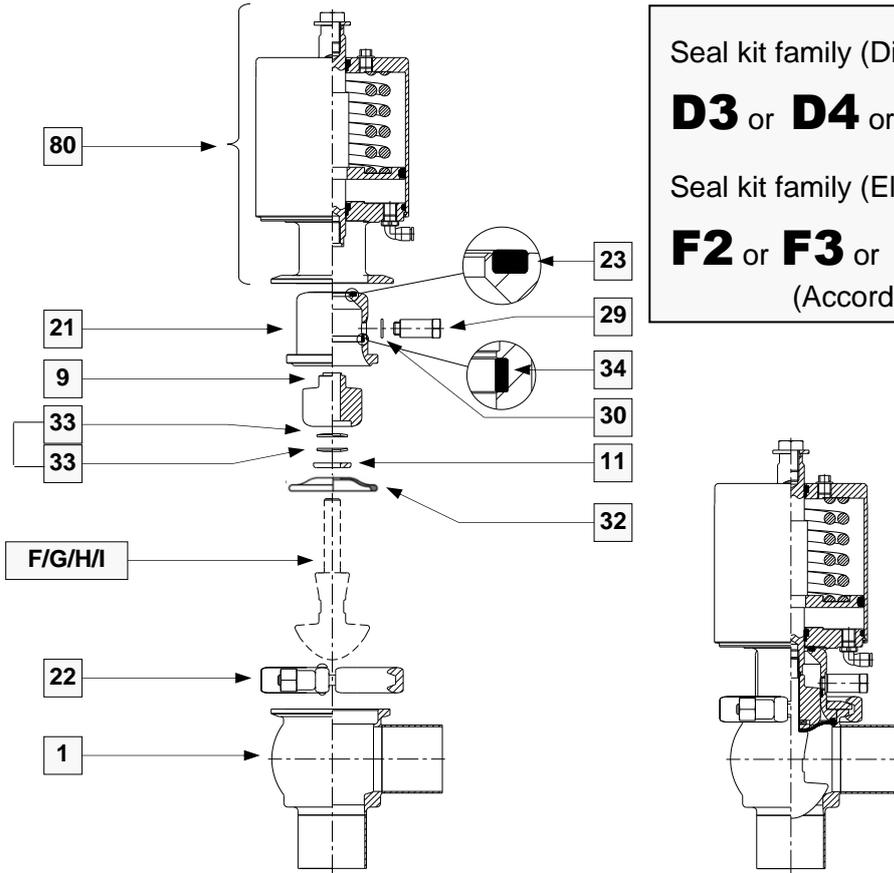

9.3 **DCX3 STANDARD REGULATING VALVE, ELASTOMER AND SECTION /2**

Seal kit family (Standard): **B1** or **B2** or **B3** or **B4** or **B5**
 Seal kit family (Elastomer): **C1** or **C2** or **C3** or **C4** or **C5**
